

This is a digital copy of a book that was preserved for generations on library shelves before it was carefully scanned by Google as part of a project to make the world's books discoverable online.

It has survived long enough for the copyright to expire and the book to enter the public domain. A public domain book is one that was never subject to copyright or whose legal copyright term has expired. Whether a book is in the public domain may vary country to country. Public domain books are our gateways to the past, representing a wealth of history, culture and knowledge that's often difficult to discover.

Marks, notations and other marginalia present in the original volume will appear in this file - a reminder of this book's long journey from the publisher to a library and finally to you.

Usage guidelines

Google is proud to partner with libraries to digitize public domain materials and make them widely accessible. Public domain books belong to the public and we are merely their custodians. Nevertheless, this work is expensive, so in order to keep providing this resource, we have taken steps to prevent abuse by commercial parties, including placing technical restrictions on automated querying.

We also ask that you:

- + *Make non-commercial use of the files* We designed Google Book Search for use by individuals, and we request that you use these files for personal, non-commercial purposes.
- + *Refrain from automated querying* Do not send automated queries of any sort to Google's system: If you are conducting research on machine translation, optical character recognition or other areas where access to a large amount of text is helpful, please contact us. We encourage the use of public domain materials for these purposes and may be able to help.
- + *Maintain attribution* The Google "watermark" you see on each file is essential for informing people about this project and helping them find additional materials through Google Book Search. Please do not remove it.
- + *Keep it legal* Whatever your use, remember that you are responsible for ensuring that what you are doing is legal. Do not assume that just because we believe a book is in the public domain for users in the United States, that the work is also in the public domain for users in other countries. Whether a book is still in copyright varies from country to country, and we can't offer guidance on whether any specific use of any specific book is allowed. Please do not assume that a book's appearance in Google Book Search means it can be used in any manner anywhere in the world. Copyright infringement liability can be quite severe.

About Google Book Search

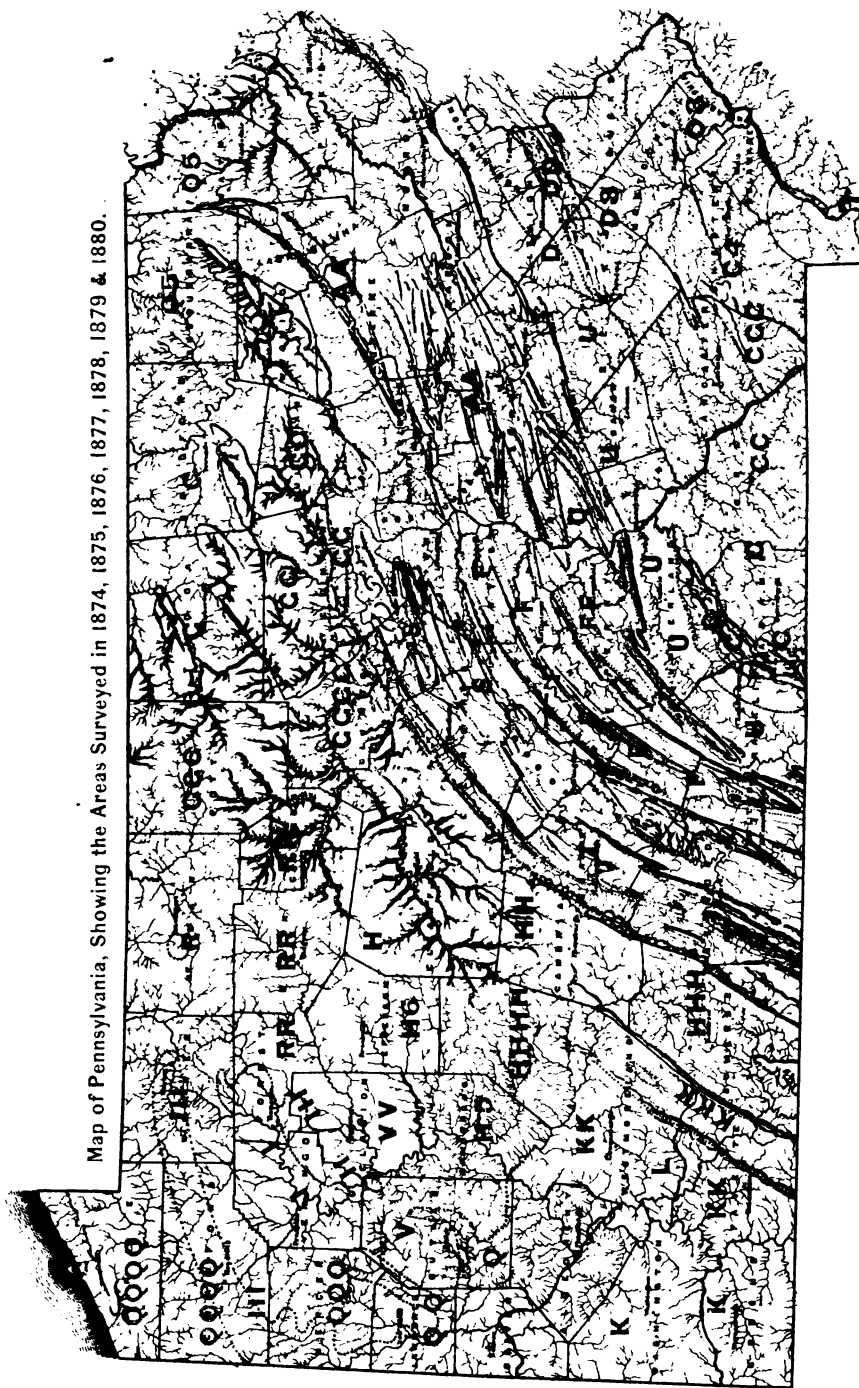

Google's mission is to organize the world's information and to make it universally accessible and useful. Google Book Search helps readers discover the world's books while helping authors and publishers reach new audiences. You can search through the full text of this book on the web at <http://books.google.com/>

REPORT OF PROGRESS

IN THE

LABORATORY OF THE SURVEY

AT

HARRISBURG,

BY

ANDREW S. McCREATH.

WITH 2 INDEXES AND MAP.

HARRISBURG:
PUBLISHED BY THE BOARD OF COMMISSIONERS
FOR THE SECOND GEOLOGICAL SURVEY.
1881.

Entered, for the Commonwealth of Pennsylvania, in the year 1880, according
to acts of Congress,

By WILLIAM A. INGHAM,
Secretary of the Board of Commissioners of Geological Survey,
In the office of the Librarian of Congress, at
WASHINGTON, D. C.

Electrotyped and printed by
LANE S. HART, State Printer,
Harrisburg, Pa.

BOARD OF COMMISSIONERS.

His Excellency, HENRY M. HOYT, *Governor*,
and *ex-officio* President of the Board, Harrisburg.

STATE GEOLOGIST.

PETER LESLEY, - - - - - Philadelphia.

ASSISTANTS IN 1881.

- JOHN F. CARLL, geologist for the Oil regions; address Pleasantville, Venango county, Pa.
- J. SUTTON WALL, to report on the coal and collieries of the Monongahela region; address Monongahela city, Pa.
- J. J. STEVENSON, geologist for Bedford and Fulton counties; address Uniontown, Fayette county, Pa.
- W. G. PLATT, geologist for Centre and Clearfield counties; address 907 Walnut street, Philadelphia.
- R. H. SANDERS, geologist for the roofing slate belt in Berks, Lehigh and Northampton; address 907 Walnut street, Philadelphia.
- I. C. WHITE, geologist for Pike and Monroe; address Morgantown, W. Va.
- C. A. ASHBURNER, geologist for the Anthracite coal fields; address Pottsville.
- H. MARTYN CHANCE, M. D., geologist to report on mining methods and appliances; address Wilkesbarre.
- A. W. SHEAFER, assistant geologist on the Anthracite Survey; address Pottsville.
- FRANK A. HILL, aid at Lansford.
- BARD WELLS, aid at Pottsville.
- H. I. MOYER, draughtsman on Anthracite Survey.
- E. V. D'INVILLIERS, topographical geologist for the Reading mountains; address 907 Walnut street, Philadelphia.
- A. E. LEHMAN, topographical geologist for the South Mountains; address 907 Walnut street, Philadelphia.
- H. CARVILL LEWIS, volunteer geologist for the study of the surface deposits, moraines, &c.; address Germantown, Pennsylvania.
- Rev'd. G. F. WRIGHT, associate volunteer geologist for the same.
- O. B. HARDEN, draughtsman at headquarters, 907 Walnut street, Philadelphia.
- A. S. MCCREATH, Chemist, in charge of the laboratory at 223 Market street, Harrisburg.
- JOHN M. STINSON, assistant chemist at Harrisburg.
- F. A. GENTH, Mineralogist and Chemist; address University of Pennsylvania, West Philadelphia.
- LEO LESQUEREUX, palaeo-botanist; address Columbus, Ohio.
- F. W. FORMAN, clerk in charge of the Distribution of Reports, 223 Market street, Harrisburg, Pa., to whom all communications or enquiries respecting publications should be addressed.
- E. B. HARDEN, topographer, in charge of illustrations, correspondence, &c., at Headquarters, 907 Walnut street, Philadelphia, to whom all business communications respecting the Work of the Survey should be addressed.

LABORATORY OF THE GEOLOGICAL SURVEY,
223 MARKET STREET,
HARRISBURG, *April 15, 1881.*

Prof. J. P. LESLEY,

State Geologist:

DEAR SIR: I herewith present my third report of the work of the Laboratory of the Survey, being a record of all the analyses made since the publication of Volume MM.

A considerable portion of my time last summer was spent in visiting the principal iron ore mines of the Cumberland Valley, and selecting average specimens of the ores for analysis. In the prosecution of this work I have to acknowledge the valuable assistance received from Col. Geo. B. Wiestling, Supt. Mont Alto Iron Works; T. B. Kennedy, Esq., President of the Cumberland Valley railroad; Henry McCormick, Esq., Harrisburg; and Mr. Daniel King, Supt. Pine Grove Iron Works. To these gentlemen especially, and to several others who furnished me with information in regard to the location of the different ore banks, I desire to tender my hearty thanks.

I would also mention, in terms of the highest praise, the valuable assistance and coöperation which I have at all times received from Mr. John M. Stinson, my assistant in the Laboratory.

It is proper that I should here correct a mistake which occurred in my Report MM, and which I only saw after the volume had been issued. My name should not appear on Plate I, page 404, in connection with an apparatus for carbon determinations. This apparatus was designed by Mr. Andrew A. Blair; and I make this correction in justice to myself as well as to Mr. Blair, who alone is entitled to the credit of the Plate, as explained in my foot note, page 404, MM.

Yours respectfully,

ANDREW S. McCREATH.

(v M³.)

Chapter IV. Fire-clays,	95
Chapter V. Miscellaneous,	99

PREFACE.

Everywhere throughout Pennsylvania wherever the great limestone formation No. II occurs, there are found more or less important deposits of brown hematite iron ore. It is this horizon which has supplied the greater part of the stock to the furnaces along the Lehigh, Schuylkill and Susquehanna rivers, and the whole of the stock to the old furnaces of the Kishicoquilis, Nittany, and Canoe valleys, and Morrison's Cove, in Middle Pennsylvania, as well as to the furnaces in Mountain Creek valley in Cumberland county, and Path valley and the Conococheague region of Franklin county.

They are scattered over the surface of the southern or limestone half of the Cumberland valley, from the Lehigh river to Maryland, and southward through Virginia and East Tennessee to Alabama. (MM, p. 199.) But they are distinguishable into ores at the top, ores in the middle, and ores at the bottom of the great limestone formation No. II. Those at the top form a belt along the middle of the valley where the Magnesian limestone underlies the Trenton limestone, or in its absence the Utica or Hudson river slates, formation No. III. This line of ore deposits is represented by the great mines of Iron-ton in Lehigh and Moselm in Berks counties; the mines along Spruce creek in Centre and Blair; the Henrietta, Leathercracker and Bloomfield mines in Morrison's Cove, Blair county; and the old Mt. Pleasant and Carrick furnace banks in Path valley, Franklin county.

Those in the middle are connected with various horizons of ferruginous limestones in the chazy and calciferous. Those at the bottom, along the north or west foot of the South Mountain-Blue Ridge range, are geologically connected with the Potsdam sandstone, or the slates which

intervene between it and the base of the calciferous, and are *locally* known as "Mountain ores." This lower line of ore deposits is represented by the great mines of Springfield in Canoe valley, Blair county; at Pine Grove, Boiling Springs and at the No. 1 Clever mammoth bank in Cumberland county; at Pond bank and Mont Alto in Franklin county; and a long line through the Shenandoah valley in Virginia.

In the Cumberland valley in York, Cumberland and Franklin counties these ores have been very extensively mined both for local use in the furnaces of the valley and for shipment to Harrisburg, Reading, Columbia, &c., to be smelted along with the more refractory magnetites. The best developments have been made along the line of the South Mountain railroad; at Boiling Springs; at Cleversburg; and near Shippensburg in Cumberland county; along the line of the Mont Alto railroad: and in Path valley in Franklin county; and on Dogwood run in York county.

Near Dillsburg in York county there is an important group of magnetic iron ore mines, connected with the Mesozoic sandstone, which have of late received considerable attention from owners of blast furnaces. These ores, carrying only a small percentage of phosphorus, have been largely used in the manufacture of Bessemer pig iron. Some of them carry a considerable percentage of sulphur as iron pyrites, and all of them contain large quantities of lime and magnesia in the form of *silicates*. In this and in many other respects they resemble the celebrated Cornwall ore of Lebanon county.

In addition to the ores mentioned above, there are found near Mercersburg and at other localities in Franklin county important deposits of *bog ore*, which are now being quite extensively developed. From 1876 to 1880 nearly ten thousand tons of this ore were mined, nearly four thousand tons of it during 1880. The ore is generally found in the slates of formation No. III, and has evidently resulted from the decomposition of iron pyrites, the large percentage of sulphuric acid which they invariably carry going to confirm this view. They are characterized by an almost uni-

formly *low percentage of phosphorus* and by being practically free from manganese.

In Warren township, Franklin county, formation No. VIII is exposed. This sometimes carries iron ore deposits of considerable importance. The Marcellus ore bed of this formation immediately underlies the black slates and overlies the green calcareous shales. But the ore is extremely variable in thickness. Sometimes the bed is so thin that it is not worth working, while, on the other hand, it is often 10 or 12 feet thick. The ore is a brown hematite only at the outcrop; deep mining always shows an earthy carbonate of iron, or a dark pyritous clay. In Huntingdon, Juniata and Perry counties considerable quantities of ore have been mined from this horizon. The ore is generally of good quality, being comparatively rich in iron and low in phosphorus.

The following table has been prepared to show, in a condensed form, the general average character of the Cumberland Valley ores, and, also, the proportion of phosphorus which each will yield in 100 parts iron. The analyses are arranged in order, according to the amount of phosphorus in 100 parts iron.

TABLE I.

No. of ore bank.	NAME OF ORE BANK.	Per cent. iron.	Per cent. manganese.	Per cent. phosphorus.	Phosphorus in 100 parts iron.

The numbers in the left hand column of the above table indicate the geographical position of the ore banks on the map accompanying this report. A single glance will suffice to show how irregularly these numbers follow each other; and, since the analyses are arranged in the table on the basis of phosphorus in 100 parts iron, this great irregularity would seem to indicate that, except perhaps merely in a very general way (see Table II) there is no intimate relationship between the *geographical* position of the ore bank and the contents of phosphorus in the ore. It is true that lines drawn in a different direction, or on a *geological* basis, might show some such connection; but it is unsafe to assume, as is too frequently done, that ores located geographically near each other should carry about the same percentage of phosphorus. This point is very clearly brought out by compar-

ing analyses Nos. 6, 6a and 7; Nos. 45 and 46; Nos. 71 and 72 and Nos. 83 and 84.

The contents of phosphorus in samples of ore from different parts of the same bank will often be found to vary considerably. Indeed, numerous analyses made by me during the past ten years have fully convinced me on this point, as I have found samples taken from different places in the same ore bank to vary as much as .21, and that too in a bank whose average ore carries only a little over a quarter of one per cent. of phosphorus. This point becomes of importance to those who are mining ores for use in the manufacture of pig-iron for the Bessemer process, in which, as at present worked in this country, only a small percentage of phosphorus is admissible. It will be noticed from the preceding table that while only a few of the Cumberland Valley ores can be used *per se* for the manufacture of Bessemer pig-iron, there are a great many of them which could be used to advantage as an admixture along with less phosphoric ores.

It will be interesting to mention here a recent discovery in metallurgy by which dephosphorization of pig-iron can be accomplished in the Bessemer converter. This is the so-called Thomas-Gilchrist or basic process. It consists simply in lining the converter with a non-silicious material consisting chiefly of lime, magnesia and alumina, and by adding a small quantity of lime to the pig-iron during the process of conversion. By this means a basic cinder is produced which carries off practically the whole of the phosphorus. Experiments have fairly demonstrated the fact that by using this process a *good quality of steel can now be made from pig-iron containing over two per cent. of phosphorus*. The practical effect of the introduction of this process on a large scale will be that, since a good quality of steel can now be made from pig-iron high in phosphorus, those ores which have hitherto been neglected on account of their high percentage of phosphorus, will now be largely mined. Many of the ores of the Cumberland Valley are peculiarly adapted for the manufacture of pig-iron intended for conversion into steel by the "basic process;" and as they occur in great

abundance and can be economically mined their rapid development in the near future should be assured.

It will be interesting to obtain a general idea of the average character of the ores in the different districts. I have therefore prepared the following Table II in which the averages of a number of samples from each district are given. In preparing the table I have selected only the well developed banks for each different group, excluding all analyses of samples from mere trial shafts or pits, as it is believed that this plan will show better the average character of the ores as at present developed.

Table III will show the extreme limits of variation in the different elements included in Table II.

TABLE II.

Average per centage of Iron, Manganese and Phosphorus in certain groups of ore. [Cumberland Valley:]

Group I includes analyses Nos. 1, 3, 4, average of 6 and 6a, 7 and 12.

Group II includes analyses Nos. 2, 9, 10 and 11.

Group III includes analyses Nos. 15, 16, 18, 20, 21, 22, 23, 24, 25, 29, 33, 34 and 35.

Group IV includes analyses Nos. 44, 45, 46, 51, 55 and 56.

Group V includes analyses Nos. 47, 48, 49, 52, 53, 57, 58 and 59.

Group VI includes analyses Nos. 63, 64, 65, 66, 67, 68, 70, average of 71 and 71*a*, 72, 73, 74 and 75.

Group VII includes analyses Nos. 77, 77*a*, 78 and 78*a*.

Group VIII includes analyses Nos. 80, 81, 82.

Group IX includes analyses Nos. 86, 87, 89, 90, 92 and average of 93 and 93*a*.

TABLE III.

Extreme limits of variation in the percentages of Iron, Manganese and Phosphorus given in Table II.

NO. OF GROUP.	Iron.	Manganese.	Phosphorus.
I.	40.85 to 47.50	.202 to 2.334	.085 to 1.482
II.	35.20 to 40.85	trace.	.036 to .067
III.	37.05 to 54.20	.165 to 3.134	.054 to .849
IV.	38.60 to 50.30	.094 to 1.260	.096 to .296
V.	36.80 to 50.62	.728 to 5.620	.308 to 1.787
VI.	34.50 to 44.90	.093 to 7.226	.067 to 1.392
VII.	32.15 to 40.90	1.347 to 4.539	.740 to 1.079
VIII.	40.95 to 45.50	.309 to 1.304	.289 to .711
IX.	40.20 to 46.62	.028 to .182	.019 to .047

Notes.

1. It will be interesting here to notice the occurrence of a peculiar variety of iron ore in the Grove bank, near Hunter's Run Station, Cumberland county. It has the *general appearance* of a *micaceous red hematite*, and has undoubtedly been frequently mistaken for this variety of ore. It occurs in fibrous radiating masses, sometimes coating the ordinary brown hematite, and occasionally in separate small lumps. A partial analysis of a tolerably pure specimen of the ore is given herewith; and in order to make its analysis more striking, the analysis of the ore with which it is found associated is given for comparison.

	"Grove lump ore."	"Red, fibrous variety."
Sesquioxide of iron,	67.000	80.714
Sesquioxide of manganese,	1.841	3.973
Sesquioxide of cobalt,170	.090
Alumina,	3.910	2.427*

* Undetermined matter.

PREFACE.

Sulphur,003	none.
Phosphorus,809	.092
Phosphorus in 100 parts iron,	1.725	.163

2. In several of the "limestone ore" banks near Shipensburg quite a quantity of "sand" is sometimes found among the wash ore. Where the amount is excessive it is usually separated by screening. It consists generally of more or less rounded *quartz grains mixed with small pieces of iron ore*. This latter is frequently slightly magnetic, and its occurrence in this particular locality is interesting, as Dr. Genth observed the same conditions in his examination of some of the limestone ores from Center county. A sample of the sand from the Calico bank (Rutherford opening) was examined with the following results :

	"Sand."	"Magnetic portion."	"Non-magnetic portion."
Protoxide of iron,171	.502	none.
Sesquioxide of iron,	54.381	88.027	88.571
Sesquioxide of manganese,258	.392	.197
Sesquioxide of cobalt,040	.080	.050

B M³.

3. Samples of the ores from different localities were tested for metals of unusual occurrence. *Chromium* was not detected in any specimen. In some of the ores a minute quantity of *zinc* was noticed ; but the amount was so exceedingly small that a separate determination of it was not thought necessary. An occasional trace of *baryta* was found, especially in the ores which carried a large percentage of *manganese*. With the exception of the "Garlic" ore not a trace of *iron pyrites* was found in any of the samples, although each one was separately examined for this compound.

In the "Garlic" ore a small quantity of *arsenic* was detected. The ore was supposed to contain a large amount of this element, and it is said that the bank was abandoned on this account.

4. Nearly all the samples from the different ore banks in the Cumberland Valley were selected by myself ; and the specimens were so taken as to give as fair a representation of the average character of the ore as was possible under the circumstances. The number of pieces constituting each sample and the part of the bank from which they were taken are given with each analysis, so that a proper estimate can be made of the examination. All the analyses were made of the ore in the *dry state* ; and this important point should be borne in mind in determining the value of the ore. As usually mined and shipped it carries quite a large percentage of *hygroscopic water*—sometimes as much as 10 to 12 per cent.—which materially decreases the percentage of metallic iron as compared with the dry ore.

In connection with the iron industries of the Cumberland Valley the following list of the blast furnaces in the district will be in place. It is taken from Mr. James Swank's "Directory to the Iron and Steel Works of the United States," published in 1880.

Franklin County.

Mont Alto furnace, Mont Alto Iron Co., Mont Alto. One

stack, $37\frac{1}{2} \times 9\frac{1}{2}$, built in 1808; cold and warm blast; open top; ore, exclusively neutral brown hematite, from the furnace property, which consists of 20,000 acres of land; the pig-iron is used for car-wheels and blooms; annual capacity, 5,600 net tons. Brand, "Mont Alto." I. S. Waterman, president; Geo. B. Wiestling, superintendent. Fuel, charcoal.

Chambersburg furnace, C. Burkhart & Co., Chambersburg. One stack building, 40×9 , to be completed in May, 1880; closed top; cold blast; ore, local hematite; specialty, car-wheel pig-iron; annual capacity, 3,000 net tons. Brand, "Chambersburg." Fuel, charcoal.

Richmond furnace, R. T. Ryon & Co., Richmond furnace. One stack, $36 \times 9\frac{1}{2}$, built in 1865 and rebuilt in 1875; open top; fuel, anthracite and coke; ores, from the Richmond mines, two miles from the furnace; annual capacity, 5,500 net tons. Formerly called Mount Pleasant Iron Works.

Carrick furnace, Bland & Spang, Carrick furnace. One stack 37×9 , built in 1828; ore, local hematite; product, first class car-wheel pig-iron; annual capacity, 2,800 net tons. Fuel, charcoal.

Franklin furnace, Hunter & Springer, St. Thomas. One stack, $32 \times 7\frac{1}{2}$, built in 1828; cold blast; ore, Cumberland Valley brown hematite; product, car-wheel pig-iron; annual capacity, 1,500 net tons. Brand, "Franklin." Fuel, charcoal.

Cumberland County.

Big Pond furnace, Philadelphia and Reading Coal and Iron Company, Newville. One stack, $33 \times 8\frac{1}{2}$, built in 1836. Fuel, charcoal.

Carlisle Iron Works, C. W. Ahl & Son, Carlisle. Works at Boiling Springs. One stack, $28 \times 8\frac{1}{2}$, built in 1798 and rebuilt in 1815; hot blast; closed top; water power; limestone and mountain ore; specialty, neutral forge pig-iron; annual capacity, 1,600 net tons. Brand, Carlisle.

Pine Grove furnace, South Mountain Mining and Iron Company, Pine Grove furnace. One stack, $45 \times 9\frac{1}{2}$, built in 1770; remodeled in 1877; hot blast; bell and hopper top;

xx M^s. REPORT OF PROGRESS. A. S. McCREATH.

ores, hematite procured on the furnace property, which comprises 27,000 acres of land. The furnace has been worked during the winter for the past two years on coke and anthracite coal, the remainder of the year on charcoal. Pig-iron is used for blooms. Annual capacity, 5,000 net tons.

In addition to the above there is a blast furnace now being built at Cleversburg by George Clever & Sons, which is expected to be in blast in a few months.

REPORT OF PROGRESS

IN THE

CHEMICAL LABORATORY AT HARRISBURG,

1879, 1880.

BY ANDREW S. McCREATH.

(1) *Bower's furnace ore bank*, on Mrs. Eliza Furray's farm, nine miles southwest of Mercersburg, Warren township. *Brown hematite of VIII.*

Sample consisted of 118 pieces taken from workings 1000' in length; shafts mostly shallow.

(2) *Richmond furnace bog bank*, about one mile north-west of furnace. *Bog ore* of III.

Sample consisted of 79 pieces taken from ore pit at different places.

(3) *Old Mt. Pleasant bank*, near Richmond furnace. *Lump and wash ore*.

Sample consisted of 445 pieces taken from pile of ore prepared for shipment.

(4) *Beaver bank*, about two miles northwest of Richmond furnace. *Lump and wash ore*.

Sample consisted of 450 pieces taken from pile of ore prepared for shipment.

(5) *Jennings Jones' bank*, four miles north of Richmond furnace.

Sample, selected by Mr. William Burgess, consisted of thirty pieces taken from different parts of mine.

(6) *Old Carrick furnace bank*, one and three fourth miles west of Fannettsburg, Metal township. *Lump ore*.

* Average of two determinations.

Sample consisted of 149 pieces taken from ore pile at furnace.

(6a) *Old Carrick furnace bank.* Unwashed *fine ore*.

Sample consisted of 185 pieces taken from ore pile at furnace.

(7) *Railroad bank*, about one and three fourth miles west of Fannettsburg, Metal township ; 200 feet north of old Carrick furnace bank.

Sample consisted of 78 pieces taken from ore pile at furnace.

(15) *Robert McCleary's bank*, one and one half miles north of Mt. Hope, Quincy township.

Sample consisted of 244 pieces taken from ore lying around bank.

(16) *George Rock's bank*, three miles south of Mont Alto, or one mile south east of Quincy.

Sample consisted of 63 pieces taken from ore in place at different parts of the bank. Mine not in operation at date of visit. Bank about 50' diameter, and from 4' to 10' deep.

(17) *Pass Orchard bank*, one and one half miles east of Quincy, in Bissecker Gap, Mont Alto estate.

Sample consisted of 165 pieces taken from ore at various pits sunk prior to 1864. Bank not worked.

(18) *Wyeth Douglas bank*, one mile north east of Quincy, near Mt. Airy.

Sample, selected by Mr. A. E. Lehman, consisted of several large pieces. No fresh sample was taken from this bank, as upon examination it was thought that the above

analysis, made in 1879, fairly represented the character of the ore.

Franklin County.

(19) *David Mentzer opening*, one and one fourth miles south-west of Altodale, (Funkstown.)

Sample consisted of 91 pieces selected from ore lying around openings.

(20) *Smith, Duncan & Avery's bank*, one mile west of Mont Alto. *Lump and wash* ore.

Sample consisted of 478 pieces taken from ore pile as prepared for shipment.

Mine worked by open cut. Has probably shipped over 5,000 tons ore.

(21) *Mill bank*, (Mont Alto Iron Co.,) about 300 yards west of furnace at Mont Alto.

Sample consisted of 125 pieces taken from ore pile at washer.

This bank is an open excavation, 20 feet deep from surface, 60'×80'. About 1,500 tons of ore mined from it prior to January, 1881.

Franklin County.

(22) *Mine No. 3*, (Mont Alto Iron Co.,) one fourth mile east of Mont Alto furnace.

Sample consisted of 200 pieces taken from ore in place at different parts of shaft.

Mine both open and underground work. Opened prior to 1864, but idle from 1865 to 1879. Capacity, about 70 tons per day.

(23) *Mine No. 4*, (Mont Alto Iron Co.,) three fourths mile east, north-east of Mont Alto furnace.

Sample consisted of 210 pieces taken from pile of ore mined for furnace use at Mont Alto.

This mine is both open and underground work. It has supplied over 100,000 tons of ore to Mont Alto furnace. Deepest point of work below surface, 230 feet; length of mine, 1,800 feet; width of mine, 35 feet.

(24) *Mine No. 5*, (Mont Alto Iron Co.,) three fourths mile east, north-east of Mont Alto furnace.

Sample consisted of 75 pieces taken from ore lying around mine.

This mine is worked both open and underground; worked to 50 feet deep from surface. Has furnished about 5,000 tons of ore.

(25) *Mine No. 8*, (Mont Alto Iron Co.,) one and one fourth miles north, 38° east, from Mont Alto furnace.

Sample consisted of 197 pieces taken from pile of ore at mine.

Excavation 200' long, 50' wide, and 25' deep.

Franklin County.

(26) *Benjamin George deposit*, one and one quarter miles northeast of Altodale. *Surface ore.*

Sample consisted of 41 pieces selected from surface ore of deposit.

(27) *John Small bank*, one and three quarter miles north of Mont Alto furnace; 500 yards east of the Shiery farm.

Sample consisted of 74 pieces taken from ore lying around opening.

Open excavation 35' long, 25' wide and 10' deep. Product about 250 tons.

(28) *Thomas Calliman bank*, about one half mile east from Pond No. 1 bank.

Sample consisted of 75 pieces taken from ore lying around openings.

Four pits sunk on this deposit to test the quantity and quality. No large quantity mined.

Franklin County.

(29) *Jacob Rock's bank*, three miles north of Mont Alto furnace. *Lump and wash ore.*

Sample consisted of 288 pieces taken from pile of ore prepared for shipment.

Mine worked by a shaft 105' deep. Has furnished about 2,000' tons of ore.

(30) *Lucy mine*, (Mont Alto Iron Co.) two and one half miles north from Mont Alto.

Sample consisted of about 50 pieces taken from ore mined from a number of test pits.

Private analysis made for Mont Alto Iron Co., and published by permission of Mr. George B. Wiestling, Supt.

(31) *Ruth mine*, (Mont Alto Iron Co.,) one half mile west of the Lucy mine.

Sample consisted of about 50 pieces taken from ore mined from various test pits.

Private analysis published by permission of Mr. George B. Wiestling, superintendent Mont Alto Iron Works.

(32) *McNeal bank*, (McCormick & Co.,) about three miles north of Mont Alto.

Sample consisted of 131 pieces taken from ore lying at opening and near it.

Mine not in operation.

Franklin County.

(33) *Pond No. 2 bank*, three miles north, northeast of Mont Alto, on Mont Alto estate.

Sample consisted of 218 pieces taken from ore lying around mine.

Mine not in operation at date of visit. Open excavation 110'×90', and about 10' deep. Worked prior to 1864, and ore used at Mont Alto furnace. Since 1864 a shaft was sunk and about 2,000 tons of ore mined at depth of 90 feet from surface.

(34) *Pond No. 1 bank*, three miles north, northeast of Mont Alto, on Mont Alto estate.

Sample consisted of 175 pieces taken from ore lying around mine. Not in operation at date of visit. 163 pieces selected by Mr. George B. Wiestling since mine has been operated gave: Metallio iron, 48.500; phosphorus, .149; water, 11.935; silicious matter, 13.930; phosphorus in 100 parts iron, .306.

This is an open excavation 300'×150', and varying in depth from 8' to 30'.

Quantities of ore were mined here prior to 1864. Laid idle from 1864 until the fall of 1880, when work re-commenced.

(35) *English mine*, two miles southeast of Greenwood.

Sample consisted of 138 pieces taken from ore in place at various parts of mine.

Opening about 150'×100'×20' deep.

(36) *Lime Kiln bank*, two and a half miles north of Mont Alto furnace.

Sample consisted of 125 pieces taken from ore lying around opening.

Open and underground. Open work say 25' diameter and 8' deep. Underground 40' deep. Probably about 400 tons taken from mine.

(37) *Guilford bank*, two and a half miles south of Greenwood, two and a half miles northeast of Altodale, or two and a half miles north, 25° east of Mont Alto.

Sample consisted of 128 pieces taken from ore lying in and around bank.

Open excavation 75' long, 30' wide and 18' deep. This is surrounded with probably 10 test pits.

(62) *Wild Cat openings*, (South Mountain Mining and Iron Co.,) about two and one half miles south west of Pine Grove.

Sample consisted of 60 pieces selected from ore taken out of several openings or shafts.

(63) *Pine Grove ore bank*, (South Mountain Mining and Iron Co.,) at Pine Grove furnace.

Sample consisted of 154 pieces taken from ore in place at different parts of bank. Ore mined for use at Pine Grove furnace.

(64) *Laurel No. 2 bank*, (South Mountain Mining and Iron Co.,) about one mile south of Laurel forge.

Sample consisted of 160 pieces taken from ore pile at bank. Bank not in operation at date of visit.

(65) *Laurel No. 1 bank*, (South Mountain Mining and Iron Co.,) at Laurel forge.

Sample consisted of 112 pieces taken from ore lying in and around mine. Bank not in operation. Samples selected independently by Mr. Daniel King, superintendent Pine Grove furnace, and analyzed by him corroborated the above results.

Cumberland County.

(93) *Landis or Fuller mine*, on Yellow Breeches creek, three miles north east of Dillsburg. *Lower level*. J. C. Fuller, Joseph Fuller and Daniel King, lessees.

Sample consisted of about 50 pounds of ore selected by Prof. Frazer. Ore taken at depth of 60 feet from surface.

(93a) *Landis or Fuller mine*, on Yellow Breeches creek, three miles north east of Dillsburg. *Upper level*.

Sample consisted of about 15 pounds of ore taken from ore pile at different places. Ore taken from workings at depth of 40 feet from surface.

Perry County.

The iron ores of Perry county occur chiefly in formations No. V and No. VIII. *The Clinton fossil ores of No. V* have already been described in Report MM, pp. 234 and 235, and in greater detail in Report F, so that no further reference to them is here necessary. *The fossil ores of VIII* may be the same as the Mansfield ores of Tioga county, but their identification with them has not yet been sufficiently established. The specimens examined from Perry county are generally very shaly and their contents of metallic iron low. Most of the brown hematite ores of Perry county are mined from the *Marcellus ore bed* which underlies the black slates of No. VIII, and overlies the green calcareous shales. Although the thickness of the ore deposit is extremely variable yet a large quantity of ore has been mined at different localities from this horizon. The quality is usually quite good, the ore being almost uniformly low in its contents of

phosphorus. A small quantity of ore has also been mined in the *Corniferous shales*; but the quality of the ore is usually inferior, although occasional deposits are met with which are quite rich in iron.

Exceedingly hard and tough plate ore; full of small drusy cavities; fracture irregular, slightly conchoidal; color, brownish grey.

Armstrong County.

The principal iron ores of Armstrong county are found at the horizon of the Ferriferous limestone. These ores have long been mined and have been the principal source of supply for the blast furnaces of the county. The ore occurs both as a brown hematite and as a carbonate. The former is usually very rich in iron, averaging, when properly mined, nearly 50 per cent. metallic iron; and as the percentage of phosphorus is not excessive a very good quality of mill iron can be made from its use. The average thickness of the ore is only about eight inches; but as it occurs directly in contact with the Ferriferous limestone—which is the flux used in the furnace—it can be easily and profitably mined. The carbonate ore is always roasted before being smelted; and at some of the furnaces it is customary to roast both varie-

ties of the ore. For this purpose the slack coal is generally used. Besides adding by its ash a considerable percentage of silicious matter to the roasted ore it not unfrequently carries quite a large percentage of phosphorus* which materially affects the quality of the pig iron produced. This question has already been discussed by Mr. Wm. G. Platt in his report on Armstrong county, volume H⁵, pp. lvii to lxiii, so that no further reference to it is here necessary.

(169) *From land of Robt. Snodgrass,* one and one fourth miles from Jamestown, Mercer county. Sample sent to Laboratory by Mr. Harry Snyder, Sharon.

Argillaceous, bluish gray; with small pits of pulverulent silicate of alumina; fracture irregular.

CHAPTER II.

COALS AND COKES.

In this chapter are included the analyses of ninety-two coals and ten cokes from Armstrong, Clarion, Jefferson, Elk, Cameron, Clinton, Lycoming, Sullivan, and Bradford counties. They represent chiefly the coals of the Lower Productive Coal Measures; and as a description of the different coal beds has already been given in Report MM., these analyses are published without further comment.

COALS.

Armstrong County.

	(170)	(171)	(172)	(173)
	<i>Ewing.</i>	<i>Schrecengost.</i>	<i>Patterson.</i>	<i>Beer.</i>
Water @ 225°C,800	.910	1.020	1.140
Volatile matter,	36.900	34.270	36.995	37.860
Fixed carbon,	50.230	53.224	53.569	57.179
Sulphur,	3.040	2.311	2.641	1.031
Ash,	9.030	9.285	5.775	2.790

Fuel ratio,	1 : 1.36	1 : 1.55	1 : 1.45	1 : 1.51

(170) *H. M. Ewing's mine*, Elder's Ridge, two miles south west of West Lebanon. *Pittsburgh coal*.

Luster dull black ; very compact ; numerous partings of pyrites.

(171) *B. U. Schrecengost's mine*, two miles west of Rural village, Cowanshannock township. *Freeport Lower coal*.

Luster generally deep black ; alternating bands of bright crystalline coal and dull black coal make up the mass. Very firm and compact.

(172) *J. F. Patterson's property*, two miles west of Rural village, Cowanshannock township. *Gallitzin coal*.

Luster deep black ; generally very firm. Partings of charcoal and pyrites rather numerous.

(173) *Beer's estate*, at North Star, three miles south west of Rural village, Cowanshannock township. *Freeport upper coal*.

Luster deep black ; firm and compact ; shows numerous partings of mineral charcoal and some pyrites.

Armstrong County.

	(174)	(175)
	<i>Rhea.</i>	<i>Marshall.</i>
Water @ 225°C,960	1.040
Volatile matter,	38.205	32.330
Fixed carbon,	52.032	49.450
Sulphur,	3.663	2.000
Ash,	5.140	15.180
	<u>100.000</u>	<u>100.000</u>
Color of ash,	reddish grey.	grey.
Coke, per cent.,	60.835	66.630
Fuel ratio,	1 : 1.36	1 : 1.53

(174) *J. C. Rhea's coal*, one half mile east of Greensdale, Valley township. *Kittanning Lower coal*.

Luster dull; firm and compact; partings of pyrites numerous.

(175) *T. H. Marshall's property*, one half mile west of Dayton, Wayne township. *Freeport Upper coal*.

Luster deep black; firm and compact; bands of ashly coal throughout specimens. Shows considerable charcoal and pyrites.

Armstrong County.

Mrs. Thompson's Mine.

	(176) <i>Upper bench.</i>	(177) <i>Middle bench.</i>	(178) <i>Lower bench.</i>
Water @ 225°C,	1.220	1.610	.810
Volatile matter,	37.530	37.820	34.465
Fixed carbon,	52.757	53.132	54.482
Sulphur,	1.888	.678	.588
Ash,	6.705	6.750	9.655
	<u>100.000</u>	<u>100.000</u>	<u>100.000</u>
Color of ash,	grey, red tinge.	grey.	grey.
Coke, per cent.,	60.850	60.560	64.725
Fuel ratio,	1 : 1.39	1 : 1.40	1 : 1.58

(176) *Mrs. Thompson's mine*, two miles south west of New Salem, Red Bank township. *Kittanning Upper coal bed; upper bench*.

Luster dull; very firm and compact; thin partings of pyrites rather numerous; laminæ somewhat indistinct.

(177) *Mrs. Thompson's mine*, two miles south west of New Salem, Red Bank township. *Kittanning Upper coal bed; top of middle bench*.

Dull black, cannel-like; fracture irregular, somewhat conchoidal.

(178) *Mrs. Thompson's mine*, two miles south west of New Salem, Red Bank township. *Kittanning Upper coal bed; bottom of middle bench*.

Luster dull, cannel-like; fracture irregular, somewhat conchoidal; laminæ indistinct.

Armstrong County.

	(179) <i>Brooks.</i>	(180) <i>Colwell.</i>	(181) <i>Colwell.</i>
Water @ 225°,640	1.450	1.070
Volatile matter,	32.665	34.810	37.110
Fixed carbon,	52.306	54.996	50.265
Sulphur,	1.044	1.054	3.225
Ash,	18.345	7.690	8.330
	<u>100.000</u>	<u>100.000</u>	<u>100.000</u>
Color of ash,	grey.	grey.	pinkish grey.
Coke, per cent.,	66.695	63.740	61.320
Fuel ratio,	1:1.60	1:1.58	1:1.35

(179) *Brooks mine*, on Cathcart run, two miles northeast of Putneyville. *Kittanning Upper coal bed*.

Luster dull, cannel-like; somewhat coated with silt; bands of ashy coal throughout specimens.

(180) *J. A. Colwell*, one half mile north west of Putneyville. *Freeport Upper coal*.

Luster deep black; somewhat coated with a yellowish white silt; numerous partings of charcoal.

(181) *J. A. Colwell*, one half mile north west of Mahoning furnace. *Freeport Lower coal*.

Deep black, firm and compact, with numerous partings of pyrites.

Armstrong County.

	(182) <i>Stewardson furnace.</i>	(183) <i>Mahoning Coal Co.</i>
Water @ 225°,	1.470	1.180
Volatile matter,	35.520	42.550
Fixed carbon,	55.545	49.686
Sulphur,835	1.909
Ash,	6.680	4.585
	<u>100.000</u>	<u>100.000</u>
Color of ash,	yellowish grey.	pinkish grey.
Coke, per cent.,	63.010	56.270
Fuel ratio,	1:1.56	1:1.17

(182) *At Stewardson furnace*, one mile east from mouth of Mahoning creek, in Madison township. F. B. & A. Laughlin. *Freeport Upper coal*.

Hard, compact, brittle ; with deep black, shining luster. Shows considerable mineral charcoal and some pyrites.

(183) *Mahoning Coal Company*, at mouth of Mahoning creek. *Kittanning Lower Coal*.

Hard, brittle, deep black ; with numerous thin partings of pyrites.

Armstrong County.

	(184) <i>Mortimer.</i>	(185) <i>Reynolds.</i>	(186) <i>Reed.</i>	(187) <i>Laufman & Co.</i>
Water @ 225°,740	.950	1.010	1.410
Volatile matter, . .	35.715	40.855	40.210	38.560
Fixed carbon, . . .	51.049	51.694	47.866	52.249
Sulphur,936	1.366	3.824	2.381
Ash,	11.560	5.185	7.590	5.400
	<u>100.000</u>	<u>100.000</u>	<u>100.000</u>	<u>100.000</u>
Color of ash,	cream.	white.	cream.	cream.
Coke, per cent., . .	63.545	58.195	58.790	60.030
Fuel ratio,	1:1.43	1:1.26	1:1.18	1:1.35

(184) *From the bluff opposite Mr. John Mortimer's house*, near Slabtown, Boggs township. *Brookville coal*.

Luster dull, with bands of ashy coal throughout specimens. Some portions have the general appearance of a cannel coal. Shows considerable pyrites in minute specks throughout the mass.

(185) *Ross Reynold's property*, one half mile north of Kittanning, Valley township. *Kittanning Lower coal*.

Deep black, shining luster ; generally firm and compact ; seems in the main free from slate and pyrites.

(186) *D. Reed's coal*, Centre Hill, three miles west of Kittanning. *Freeport Lower coal*.

Firm and compact ; luster dull black ; more or less stained iron oxide ; considerable mineral charcoal and iron pyrites in thin partings.

(187) *Laufman & Co.*, at Apollo, Kiskiminitas township. *Freeport Upper coal*.

Coal, of a deep black color, is seamed with mineral charcoal and iron pyrites. It carries an unusually large amount of carbonate of lime in thin scales disseminated throughout the mass.

<i>Armstrong County.</i>			
(188)	(189)	(190)	(191)
<i>Hagy.</i>	<i>Rogers.</i>	<i>Winfield Furnace.</i>	<i>Wangler.</i>
Water @ 225°, . . .	1.430	1.160	1.010
Volatile matter, . .	39.835	42.720	42.650
Fixed carbon, . . .	50.206	48.742	48.661
Sulphur,	2.819	2.313	1.644
Ash,	5.710	5.065	6.035
	<u>100.000</u>	<u>100.000</u>	<u>100.000</u>
Color of ash,	cream.	reddish grey.	pinkish grey.
Coke, per cent., . .	58.735	56.120	56.340
Fuel ratio,	1 : 1.26	1 : 1.14	1 : 1.04

(188) *John Hagy's property*, north end of Freeport town, South Buffalo township. *Freeport Upper coal.*

Generally firm and compact; luster deep black, shining; considerable pyrites in thin partings; laminæ rather indistinct.

(189) *R. Rogers' mine*, two miles west of Buffalo Mills, on Butler county line. *Kittanning Lower coal.*

Somewhat coated with iron oxide; iridescent; deep black on fresh fracture; considerable pyrites in partings.

(190) *Winfield furnace property*, on Rough run, near Winfield furnace, two and one half miles north west of Slate Lick. *Clarion coal.*

Luster generally dull, with bands of bright crystalline coal throughout specimens. Very firm; with pyrites in thin partings.

(191) *J. A. Wangler's mine*, on Fox farm, one and one half miles north west of Parker City. *Clarion coal.*

Hard and exceedingly compact; laminæ rather indistinct; luster generally deep black, pitchy; portions of the specimen strongly iridescent. Thin partings of pyrites numerous.

<i>Clarion County.</i>			
(192)	(193)	(194)	(195)
<i>Fairmount Coal Co.'s Mines.</i>			
Water @ 225°,	1.320	.850	.990
Volatile matter,	40.565	39.655	41.000
Fixed carbon,	53.980	49.787	48.571
Sulphur,	1.490	1.548	1.534
Ash,	2.645	8.160	7.965
	<u>100.000</u>	<u>100.000</u>	<u>100.000</u>

Color of ash,	reddish grey.	reddish grey.	white.	pink.
Coke, per cent.,	58.115	59.495	58.070	59.995
Fuel ratio,	1 : 1.33	1 : 1.25	1 : 1.18	1 : 1.06

(192) *Fairmount Coal Co.'s mines*, near New Bethlehem.
Bank No. 1, Freeport Lower coal.

Deep black ; brittle ; laminæ rather indistinct ; partings of mineral charcoal rather numerous.

(193) *Fairmount Coal Co.'s mines*, near New Bethlehem.
Bank No. 4, Upper bench. Kittanning Lower coal.

Luster deep black ; bands of bright-pitchy coal run throughout the specimens ; also bands of greyish black ashy coal.

(194) *Fairmount Coal Co.'s mines*, near New Bethlehem.
Bank No. 4, Middle bench. Kittanning Lower coal.

Same general appearance as No. (193).

(195) *Fairmount Coal Co.'s mines*, near New Bethlehem.
Bank No. 4, lower bench. Kittanning Lower coal.

Luster deep black ; rather tender ; carries an unusually large number of thin partings of iron pyrites more or less decomposed.

Clarion County.

	(196)	(197)	(198)	(199)
	<i>Fairmount Coal Co.'s Mines.</i>			
Water @ 225°,	4.765	1.260	1.300	.900
Volatile matter,	35.675	35.130	35.825	39.695

(208) *Sligo Branch Coal Co.*, Rimersburg, Toby township. *Kittanning Lower coal*. Average sample.

Deep black, shining; shows a good deal of pyrites in masses throughout specimens.

(209) *T. O. Somerville's bank*, Toby township. *Kittanning middle coal*. Average sample.

Luster, deep black; numerous bands of greyish black ashy coal throughout specimens. Rather compact and brittle.

(210) *Fox bank*, Piney township. *Kittanning Lower coal*. Average sample.

Luster, deep black, shining; brittle; pyrites in minute crystals in partings.

(211) *McCall's bank*, West Freedom, Perry township. *Kittanning Lower coal*.

Deep black, shining; brittle; shows a small amount of pyrites in minute crystals.

Jefferson County.

Color of ash, reddish reddish reddish reddish
 grey. grey. grey. grey.

(262) *McIntyre Coal Company*, Ralston, Lycoming county. *Coke from unwashed coal.*

Luster dull; generally rather close-grained; lenticular masses of slate throughout specimens. Coke comparatively easily crushed.

(263) *Merriman & Co.*, Williamsport, Clinton county. *Coke from 4' seam of coal. From lump coal.*

Rather close-grained; luster dull.

(264) *Merriman & Co.*, Williamsport, Clinton county. *Coke from 4' seam of coal. From slack coal.*

Rather close-grained; luster dull; contains considerable slate.

(265) *Stewardson furnace*, one mile east from mouth of Mahoning creek, in Madison township, Armstrong county. F. B. & A. Laughlin. *Coke made in open pits at works, from Freeport Upper coal.*

Very open and tender; luster dull; considerable slate throughout.

Clarion County.

Color of ash,	reddish grey.	red.	red.	reddish brown.

(266) *Fairmount Coal Company*, New Bethlehem. *Coke from Freeport Lower washed slack coal.*

Luster silvery; structure rather dense; numerous lenticular masses of slate, especially in center of specimen.

(267) *Fairmount Coal Company*, near New Bethlehem. *Coke from washed slack, Freeport Lower coal.*

Structure open; luster bright and silvery; small masses of slate throughout specimens.

(268) *Fairmount Coal Company*, near New Bethlehem.
Coke from washed slack, Kittanning Upper coal.

Structure rather dense generally; luster for the most part bright, silvery. Considerable slate throughout specimens.

(269) *Fairmount Coal Company*, near New Bethlehem.
Coke from Kittanning Lower slack coal.

Bright, silvery; rather close-grained and dense; small lenticular masses of slate throughout specimen.

Clarion County.

CHAPTER III.

LIMESTONES.

A more or less detailed description of the different limestone beds has already been given in Report MM, pp. 281 to 362, so that a repetition is here unnecessary. The analyses given in this report represent the limestones of Formations No. II, Siluro-Cambrian; No. VI, Lewistown limestone; Vo. VIII, Chemung limestone; No. IX, the Catskill limestones; and the limestones from the different horizons in the Coal Measures. The Mesozoic limestones are represented by the specimens from Welty's quarry in York county. These latter are characterized by containing quite a considerable percentage of lime and magnesia in the form of silicates.

Chester County.

	(272)
	<i>Swayne.</i>
Carbonate of lime,	54.071
Carbonate of magnesia,	43.309
Oxide of iron and alumina,618
Sulphur,018
Phosphorus,003
Silicious matter,	1.950
	<u>99.959</u>

(272) *Benjamin Swayne's quarry*, London Grove twp.
Limestone of II.

Coarse-grained, crumbling; slightly brownish grey.

York County.

	(273)	(274)	(275)	(276)	(277)
	<i>Welty's quarries.</i>				
Lime,	44.950	44.220	47.000	42.940	43.920
Magnesia,	5.275	6.408	8.845	8.045	2.929
Ferrous oxide,	1.179	.864	.585	1.098	2.304
Manganous oxide,	trace.	trace.	trace.	trace.	trace.
Alumina,	2.460	2.320	1.690	2.680	5.090
Sulphur,004	.003	.004	.003	.005
Phosphorus,011	.012	.008	.013	.081

(79 M³.)

Carbonic acid,	31.040	34.030	34.985	30.072	17.020
Water,	1.460	1.150	1.270	1.160	1.720
Insoluble residue,	14.010	10.890	10.460	18.580	27.010
	<u>100.389</u>	<u>99.892</u>	<u>99.842</u>	<u>99.591</u>	<u>100.029</u>

The ignited insoluble residues contain:

Silica,	11.603	8.766	7.710	13.144	25.320
Ferric oxide,089	.148	.211	.126	.113
Alumina,236	.126	.231	.524	.205
Lime,838	.634	1.238	2.560	.483
Magnesia,666	.465	.319	1.777	.304

(273), (274), (275), (276), (277). *Welty's quarries*, on the Dillsburg branch of the C. V. R. R., about a third of a mile north of the depot at Dillsburg. *Mesozoic limestone*.

Brecciated; rather hard and tough, with irregular fracture; color, generally greenish grey. Portions of the mass consist of a white saccharoidal limestone. Some of the specimens show beautiful dendritic impressions.

Cumberland County.

	(278) <i>Pine Grove.</i>	(279) <i>Craighead.</i>
Carbonate of lime,	72.321	86.357
Carbonate of magnesia,	20.591	5.236
Sesquioxide of iron,	4.420	.571
Alumina,083	
Sesquioxide of manganese,433	none.
Sulphur,011	.014
Phosphorus,047	.013
Silicious matter,	2.310	8.410

(278) *Pine Grove limestone*, at Pine Grove furnace. *Limestone of II.*

Rather hard; light grey and brownish grey; more or less coated and seamed with oxide of iron. (J. M. S.)

(279) *Craighead limestone quarry*, two miles north of Mt. Holly. Surface stone. *Limestone of II.*

Rather hard and fine-grained; dark bluish grey. (J. M. S.)

Franklin County.

	(280) <i>Mine No. 3.</i>	(281) <i>Mine No. 4.</i>
Carbonate of lime,	89.178	54.398
Carbonate of magnesia,961	42.694
Oxide of iron and alumina,806	.941
Phosphorus,050	.013
Silicious matter,	8.840	2.160

(280) *Limestone from Mine No. 3, Mont Alto Iron Company, Mont Alto.* Sample consisted of 106 pieces.

Rather soft ; fracture conchoidal ; color, yellowish brown. (J. M. S.)

(281) *Limestone from Mine No. 4, Mont Alto Iron Company, Mont Alto.* Sample consisted of 115 pieces.

Rather soft, irregular fracture ; light bluish grey. (J. M. S.)

Franklin County.

(282)

Shiery quarry.

Carbonate of lime,	51.743
Carbonate of magnesia,	43.436
Carbonate of iron,665=.321 % iron.
Alumina,222
Sulphate of lime,046=.011 % sulphur.
Phosphate of lime,065=.013 % phosphorus.
Silica,	4.090

100.267

(282) *Shiery quarry*, one and one half miles north east from Mont Alto. Sample (201 pieces) taken from different places in the several openings.

This deposit represents a true lithological dolomite, as shown by the following figures :

	<i>Shiery.</i>	<i>Dolomite.</i>
Carbonate of lime,	54.36	54.35
Carbonate of magnesia,	45.64	45.65
	<u>100.00</u>	<u>100.00</u>

Franklin County.

(283)

(284)

S. Z. Hawbecker.

Carbonate of lime,	97.321	67.257
Carbonate of magnesia,	1.286	30.702
Oxide of iron and alumina,260	.700
Phosphorus,005	.007
Silica,980	1.760
	<u>99.852</u>	<u>100.426</u>

(283) *S. Z. Hawbecker's quarry*, at Williamson. *Best quality.*

(284) *S. Z. Hawbecker's quarry*, at Williamson. *Worst quality.*

6 M^s.

Franklin County.

	(285)
	<i>Battin.</i>
Carbonate of lime,	47.375
Carbonate of magnesia,	15.581
Oxide of iron and alumina,	6.760
Silica,	29.640
	<u>99.356</u>

(285) *M. E. Battin's cement quarry*, at Scotland.

Sample taken from layer 4' thick in face of quarry ; about the middle of Formation No. II.

A considerable quantity of limestone has been mined here for use as a cement ; but the quarry is now abandoned.

Perry County.

	(286)	(287)	(288)
		<i>Newport.</i>	
Carbonate of lime,	60.214	49.178	33.482
Carbonate of magnesia,	1.684	1.816	1.967
Oxide of iron and alumina,	5.384	5.761	8.298
Phosphorus,068	.052	.084
Silicious matter,	81.520	41.940	53.810

(286) *Near Newport*, on north east side of Juniata river, south of the Newport bridge. 4' thick. *Chemung limestone*.

Specimen consists of a mass of comminuted shells cemented together in a silicious matrix. Rather compact ; reddish grey.

(287) Same as No. (286), with same general appearance ; but more open and of a reddish brown color.

(288) Same as No. (286), with same general appearance ; the shells fewer in number.

Perry County.

	(289)	(290)
		<i>Thos. Still.</i>
Carbonate of lime,	71.782	89.642
Carbonate of magnesia,	7.621	1.816
Oxide of iron and alumina,	2.550	1.206
Phosphorus,018	.011
Silicious matter,	15.720	6.580

(289) *Thos. Still's quarry*, Mahonoy valley, north west

side of Dick's Hill, two miles north east of Montebello narrows. *Lewistown limestone*. 25' exposed.

Fine-grained; brittle; numerous lenticular masses of bluish black slate; color, generally dark blue.

(290) *Thos. Still's quarry*, Mahonoy valley, north west side of Dick's Hill, two miles north east of Montebello narrows. *Lewistown limestone*. 25' exposed.

This is the general character of the limestone in the exposure; but shows some of No. (289).

Rather coarse-grained and brittle; fossiliferous; irregularly seamed and mottled with calcite; bluish grey.

Armstrong County.

	(291)	(292)	(293)	(294)
	<i>Hamilton.</i>	<i>Mehaffey & McGill.</i>	<i>Mehaffey & McGill.</i>	<i>Mehaffey & McGill.</i>
Carbonate of lime, . . .	84.857	96.453	93.214	98.571
Carbonate of magnesia, .	1.868	1.445	2.065	1.324
Oxide of iron and alumina, .	2.568	.964	1.340	1.207
Phosphorus,024	.007	.004	.029
Silicious matter,	9.520	.830	2.200	3.170

(291) From *W. R. Hamilton's land*, near the coal mine; one and one half miles north from Putneyville. *Freeport Upper limestone*.

Fine-grained, tough; dark grey.

(292) *Mehaffey & McGill's quarry*, three fourths mile east from Logansport. *Freeport Upper limestone; top layer*.

Fine-grained and brittle; dark pearl grey.

(293) *Mehaffey & McGill's quarry*, three fourths mile east from Logansport. *Freeport Upper limestone; second layer*.

Fine-grained; tough; dark pearl grey.

(294) *Mehaffey & McGill's quarry*, three fourths mile east from Logansport. *Freeport Upper limestone; bottom layer*.

Very compact and fine-grained; hard and tough; light pearl grey with conchoidal fracture.

Armstrong County.

	(295) <i>Reefer.</i>	(296) <i>Marshall.</i>	(297) <i>Monroe.</i>
Carbonate of lime,	88.839	94.928	94.642
Carbonate of magnesia,	1.513	1.310	1.574
Oxide of iron and alumina,	2.557	1.246	1.182
Phosphorus,021	.018	.012
Silicious matter,	5.060	1.920	1.850

(295) *John Reefer's quarry*, three miles south west of Rural Village. *Freeport Upper limestone.*

Fine-grained; tough; mottled with calcite; dark grey; fracture conchoidal.

(296) *Wm. Marshall's quarry*, one half mile east of Dayton. *Freeport Upper limestone.*

Fine-grained; tough; mottled with calcite; dark grey.

(297) *S. Monroe's quarry*, two miles south west of Slate Lick. *Freeport Upper limestone.*

Fine-grained; tough; dark pearl grey.

Armstrong County.

	(298) <i>A. J. Dull & Co.</i>	(299) <i>A. J. Dull & Co.</i>	(300) <i>A. J. Dull & Co.</i>
Carbonate of lime,	89.303	82.589	89.857
Carbonate of magnesia,	1.900	5.751	2.898
Oxide of iron and alumina,	2.002	3.367	1.860
Phosphorus,021	.063	.017
Silicious matter,	4.830	7.310	4.520

(298) *A. J. Dull & Co.'s quarries*, in the ravine of Fort run, near Manorville. *Freeport Upper limestone; upper layer.*

Very compact and fine-grained; dark pearl grey, with conchoidal fracture.

(299) *A. J. Dull & Co.'s quarries*, in the ravine of Fort run, near Manorville. *Freeport Upper limestone; second layer.*

Fine-grained; hard and tough; somewhat argillaceous; dark pearl grey, with conchoidal fracture; small crystals of pyrite throughout the specimen.

(300) *A. J. Dull & Co.'s quarries*, in the ravine of Fort run, near Manorville. *Freeport Upper limestone; third layer.*

Very compact and fine-grained; slightly mottled with calcite; pearl grey, with conchoidal fracture.

Armstrong County.

	(301) <i>Davis.</i>	(302) <i>Putney.</i>
Carbonate of lime,	53.750	64.160
Carbonate of magnesia,	9.989	1.838
Oxide of iron and alumina,	7.780	7.450
Phosphorus,131	.305
Silicious matter,	23.840	22.280

(301) *M. Davis' limestone*, one half mile south east of Cochran's mills. *Johnstown cement*. Outcrop specimen.

Rather coarse grained; exceedingly hard and tough; bluish grey.

(302) *George S. Putney's limestone*, at Putneyville. *Johnstown cement*.

Rather coarse grained; hard and tough; bluish grey; irregularly stained with carbonaceous matter.

Armstrong County.

(303)

Stewardson furnace.

Lime,	53.500—95.535 % carbonate of lime.
Magnesia,432= .907 % carbonate of magnesia.
Sesquioxide of iron,	1.114
Sesquioxide of manganese,206
Alumina,174
Sulphuric acid,064= .025 % sulphur.
Phosphoric acid,082= .036 % phosphorus.
Carbonic acid,	42.899
Water,150
Silica,	2.030

100.151

(303) *From Stewardson furnace*, one mile east from mouth of Mahoning creek, in Madison township. F. B. & A. Laughlin. *Ferriferous limestone*.

Fine grained; full of fossil casts; pearl grey to reddish grey; fracture rough, slightly conchoidal.

Armstrong County.

	(304) <i>Stewardson.</i>	(305) <i>Colwell.</i>	(306) <i>Reynolds.</i>
Carbonate of lime,	96.007	94.721	95.587
Carbonate of magnesia,	1.498	1.044	1.422
Oxide of iron and alumina,	1.462	1.383	.980
Phosphorus,084	.047	.035
Silicious matter,790	2.300	2.110

(304) *Stewardson furnace limestone*, one mile east from mouth of Mahoning creek, in Madison township. F. B. & A. Laughlin. *Ferriferous limestone*.

Fine-grained; full of fossil casts; pearl grey; with conchoidal fracture.

(305) *J. A. Colwell's quarry*, one fourth mile north west from Mahoning furnace. *Ferriferous limestone*.

Rather compact and fine-grained; full of fossil casts; bluish grey; with conchoidal fracture.

(306) *Ross Reynolds' limestone*, one half mile north from Kittanning. *Ferriferous limestone*.

Fine-grained; fossiliferous; mottled with calcite; rather tough; light-pearl grey.

Armstrong County.

	(307) <i>George.</i>	(308) <i>Rhea.</i>	(309) <i>Graff.</i>
Carbonate of lime,	94.185	93.246	93.292
Carbonate of magnesia,	1.483	1.740	.968
Oxide of iron and alumina,	2.089	1.667	1.713
Phosphorus,081	.082	.047
Silicious matter,	2.100	3.420	3.220

(307) *P. George*, two miles west from South Bend. *Ferriferous limestone*.

Fine-grained; fossiliferous; mottled with calcite; dark grey.

(308) *J. C. Rhea*, one half mile west of Greendale. *Ferriferous limestone*.

Rather coarse-grained; fossiliferous; brittle; bluish grey.

(309) *P. Graff*, near Buffalo Mills. *Ferriferous limestone*.

Fine-grained; brittle; more or less stained with ferric oxide; fracture rough, somewhat conchoidal; color, dark grey.

Clarion County.

	(310) <i>New Athens.</i>	(311) <i>Reichert.</i>	(312) <i>Reimers- burg.</i>
Carbonate of lime,	93.903	82.678	82.000
Carbonate of magnesia,	2.270	8.248	6.811
Oxide of iron and alumina,765	1.365	2.796
Phosphorus,008	.022	.015
Silicious matter,	1.900	5.320	7.940

(310) *At New Athens*, Madison township. *Freeport Upper limestone*.

Rather fine-grained; mottled and seamed with calcite; dark grey.

(311) *Reichert's quarry*, Perry township. *Freeport Upper limestone*.

Rather fine-grained; mottled with calcite; dark-pearl grey.

(312) *Three miles north east from Reimersburg*, Toby township. *Freeport Lower Limestone*.

Exceedingly hard and tough; mottled and stained with ferric oxide; color, generally bluish grey.

Clarion County.

	(313)	(314)	(315)	(316)
	<i>Long Run.</i>	<i>Hindman.</i>	<i>Sligo furnace.</i>	<i>Barger.</i>
Carbonate of lime,	95.282	95.582	95.196	96.428
Carbonate of magnesia,407	.930	1.265	1.262
Oxide of iron and alumina, 1.310		1.050	1.529	.867
Phosphorus,061	.070	.081	.023
Silicious matter,	2.190	1.960	1.780	1.110

(313) *On Long Run*, Porter township. *Ferriferous limestone*. Bed five feet to six feet thick, with nine inches carbonate ore overlying.

Brittle; more or less stained with ferric oxide; generally pearl grey.

(314) *Hindman's quarry*, Clarion township. *Ferriferous limestone*.

Fine grained; mottled with calcite; rather brittle; bluish grey.

(315) *Sligo furnace*, Piney township. *Ferriferous limestone*.

Fine grained; rather tough; stained with ferric oxide; light bluish grey.

(316) *Barger quarry* Perry township. *Ferriferous limestone*.

Rather coarse grained; mottled with calcite; bluish grey.

Jefferson County.

	(317)	(318)	(319)
	<i>Jas. Smith.</i>	<i>Jas Smith.</i>	<i>Jacob. Smith.</i>
Carbonate of lime,	92.500	75.357	77.143
Carbonate of magnesia,	2.497	9.330	4.691
Oxide of iron and alumina,	1.530	4.230	3.790
Phosphorus,023	.017	.073
Silicious matter,	2.390	9.780	11.780

(317) *Property of James Smith*, two miles north east from Big Run. *In Lower Barren measures, 200 feet to 225 feet above Freeport upper coal.*

Rather coarse grained ; brittle ; bluish grey.

(318) *Property of James Smith*, two miles north east from Big Run. *In Lower Barren measures, 125 feet to 150 feet above the Freeport upper coal.*

Fine grained ; rather hard and tough ; pearl grey.

(319) *Property of Jacob Smith*, two miles north from Big Run. *150 feet to 175 feet above Freeport upper coal.*

Fine grained ; rather brittle with conchoidal fracture ; irregularly seemed with calcite ; dark bluish grey.

Jefferson County.

	(320) <i>Lane.</i>	(321) <i>Iler.</i>	(322) <i>Iler.</i>
Carbonate of lime,	89.107	48.571	90.000
Carbonate of magnesia,	1.611	23.762	2.860
Oxide of iron and alumina,	2.140	7.250	1.285
Phosphorus,024	.032	.011
Silicious matter,	6.170	16.660	3.480

(320) *N. B. Lane's property*, one mile south east from Brockwayville. *Freeport Upper limestone.*

Fine-grained ; brittle ; sparkles with calcite ; generally pearl grey.

(321) *John Iler's property*, one mile north west from Perrysville. *Freeport Upper limestone ; upper bench.*

Hard and tough ; appearance, sandy ; fracture, irregular ; color, light pearl grey.

(322) *John Iler's property*, one mile north west from Perrysville. *Freeport Upper limestone ; lower bench.(?)*

Rather fine-grained ; comparatively brittle ; mottled with calcite ; bluish grey.

Jefferson County.

	(323) <i>Hopkins.</i>	(324) <i>Huffman.</i>	(325) <i>Lane.</i>	(326) <i>Evans Round Top.</i>
Carbonate of lime,	91.875	88.928	87.035	92.857
Carbonate of magnesia,	2.421	1.589	1.558	1.680
Oxide of iron and alumina,	1.312	1.740	2.170	2.320
Phosphorus,012	.023	.057	.019
Silicious matter,	3.130	6.770	8.400	2.070

(323) *From property of D. Hopkins*, two miles north west from Frostburg. *Freeport limestone*.

Very fine-grained and brittle; mottled with calcite; pearl grey.

(324) *From property of A. Huffman*, two miles north east from Worthville. *Freeport limestone*.

Fine-grained; brittle; mottled with calcite; pearl grey.

(325) *N. B. Lane's property*, one mile south east from Brockwayville. *Freeport Lower limestone*.

Fine-grained; hard and brittle; brownish grey.

(326) *From Evans Round Top*, one half mile east from Corsica. *Freeport Lower limestone*.

Fine-grained; hard and brittle; brownish grey.

Jefferson County.

	(327) <i>Lane.</i>	(328) <i>Iler.</i>
Carbonate of lime,	51.410	82.893
Carbonate of magnesia,	8.962	1.891
Oxide of iron and alumina,	7.790	4.653
Phosphorus,033	.300
Insoluble residue,	33.900	8.020

(327) *N. B. Lane's property*, one mile south east from Brockwayville. *Johnstown cement bed*.

Hard and tough; argillaceous; more or less stained with iron oxide; color, generally dark grey.

The ignited "insoluble residue" contains: Silica, 27.570; alumina, 4.800; sesquioxide of iron, trace; lime, trace; magnesia, .245. (J. M. S.)

(328) *John Iler's property*, one mile north west from Perrysville. *Johnstown cement bed*.

Rather hard and tough; fracture, irregular, rough; dark bluish grey.

Jefferson County.

	(329) <i>Bovaird.</i>	(330) <i>Hanna.</i>	(331) <i>Enty.</i>
Carbonate of lime,	94.392	93.643	96.428
Carbonate of magnesia,	1.702	1.816	.908
Oxide of iron and alumina,	1.315	1.310	.990
Phosphorus,081	.080	.084
Silicious matter,	1.910	2.040	1.300

(329) *C. Bovaird*, three miles north west from Brockwayville. *Ferriferous limestone*.

Fine grained ; brittle ; pearl grey.

(330) *From property of William Hanna*, two miles north east from Sprankle's mills. *Ferriferous limestone*.

Hard and tough ; fine grained ; full of fossil casts ; dark bluish grey.

(331) *From property of A. Enty*, one half mile south east from Worthville. *Ferriferous limestone*.

Fine grained ; brittle ; fossiliferous ; light bluish grey.

Jefferson County.

	(332) <i>Shields.</i>	(333) <i>Frost.</i>
Carbonate of lime,	96.578	39.428
Carbonate of magnesia,832	1.816
Oxide of iron and alumina,780	4.760
Phosphorus,087	.041
Silicious matter,	1.280	51.460

(332) *Samuel Shield's property*, one mile north from Dowlingville. *Ferriferous limestone*.

Rather fine grained ; fossiliferous ; sparkles with calcite ; pearl grey.

(333) *Near Frost's house*, four miles north east from Brookville, on Ridgeway road.

Appearance sandy ; exceedingly hard and tough ; fracture, slightly conchoidal ; color, bluish grey.

Forest County.

	(334) <i>Kelley.</i>
Carbonate of lime,	40.642
Carbonate of magnesia,	1.172
Oxide of iron and alumina,	2.120
Phosphorus,018
Silicious matter,	55.160

(334) *Kelley's quarry*, four miles east from Tionesta, on Tionesta creek ; Saddle Bags tract. *Tionesta limestone* ; two feet to three feet thick.

Coarse grained ; appearance, sandy ; exceedingly hard and tough ; bluish grey.

<i>Elk County.</i>			
(335)	(336)	(337)	(338)
<i>Hyde.</i>	<i>Chamberlain.</i>	<i>McAllister.</i>	<i>Fox.</i>
Carbonate of lime,	80.357	81.875	69.357
Carbonate of magnesia, . . .	1.619	7.189	9.308
Oxide of iron and alumina, . .	3.610	2.750	4.885
Phosphorus,066	.066	.077
Silicious matter,	12.290	6.540	13.680
			21.250

(335) *From J. S. Hyde's farm, Horton township, one mile south from Brandy Camp P. O., on Brandy Camp creek. Freeport upper limestone.*

Rather coarse grained and brittle; fracture irregular; light bluish grey.

(336) *J. S. Chamberlain's farm, Horton township; Brandy Camp creek, one and one half miles south from Brandy Camp P. O. "K limestone." Freeport Lower limestone.*

Rather fine grained and brittle, with conchoidal fracture; light bluish grey.

(337) *J. C. McAllister's farm, Horton township; Brandy Camp P. O. "K limestone of Horton township." Freeport Lower limestone.*

Rather fine grained and brittle; fracture, sub-conchoidal; color, pearl grey.

(338) *T. Fox's farm, Horton township; Mead run, three fourths mile north from Brockport. "K limestone." Freeport Lower limestone.*

Fine grained and brittle; fracture, sub-conchoidal; bluish grey.

<i>Elk County.</i>			
(339)	(340)	(341)	
<i>Winslow.</i>	<i>Chamberlain.</i>	<i>Brandy Camp.</i>	
Carbonate of lime,	86.910	86.214	91.785
Carbonate of magnesia,	6.659	1.785	1.808
Oxide of iron and alumina,	2.205	2.610	1.710
Phosphorus,017	.050	.082
Silicious matter,	2.390	7.370	3.570

(339) *G. W. Winslow's farm, two miles north east from Benezette. Ferriferous limestone. Ten feet thick.*

Rather coarse grained; brittle; mottled with calcite and more or less stained with ferric oxide. Color, generally pearl grey.

(340) *One mile east from J. S. Chamberlain's farm, from branch of Toby creek, Fox township. Ferriferous limestone.*

Very fine grained and brittle ; fracture, sub-conchoidal ; dark bluish grey.

(341) *Brandy Camp P. O., Horton township. Ferriferous limestone.*

Rather coarse grained ; brittle ; mottled with calcite ; bluish grey.

Elk County.

Oyster's Quarry.

	(342) <i>Top.</i>	(343) <i>Middle.</i>	(344) <i>Bottom.</i>
Carbonate of lime,	27.857	54.553	49.732
Carbonate of magnesia,963	1.135	1.331
Oxide of iron and alumina, . .	3.830	3.030	3.650
Phosphorus,062	.104	.238
Silicious matter,	61.670	38.950	41.690

(342) *From Oyster's quarry, Brockport, Horton township. Ferriferous limestone. 7', more or less, thick. Top stratum.*

Appearance shaly ; fossiliferous ; comparatively soft ; bluish black.

(343) *From Oyster's quarry, Brockport, Horton township. Ferriferous limestone. 7', more or less, thick. Middle stratum.*

Fine-grained ; brittle ; argillaceous ; dark blue.

(344) *From Oyster's quarry, Brockport, Horton township. Ferriferous limestone. 7', more or less, thick. Bottom stratum.*

Appearance shaly ; fossiliferous ; bluish black.

Elk County.

	(345) <i>Kane, Upper bed.</i>	(346) <i>Kane, Lower Bed.</i>	(347) <i>McAlister.</i>	(348) <i>Kyler's Corners.</i>
Carbonate of lime,	94.357	94.107	50.357	85.714
Carbonate of magnesia,	1.634	1.369	2.467	1.171
Oxide of iron and alumina,	1.633	1.626	7.040	3.422
Phosphorus,081	.063	.054	.069
Silicious matter,	1.630	2.200	36.860	8.390

(345) *Gen. Kane's quarry, Jones township ; Johnson run coal basin ; four miles north east from Wilcox. Ferriferous limestone. Upper bed.*

Fine-grained and very brittle; more or less stained with iron oxide; reddish grey.

(346) *Gen. Kane's quarry*, Jones township; Johnson run coal basin; four miles north east from Wilcox. *Ferriferous limestone. Lower bed.*

Rather fine-grained; brittle; somewhat mottled with calcite; dark-bluish grey.

(347) *J. C. McAllister's farm*, Horton township; Brandy Camp P. O. *Johnstown Cement bed.*

Appearance sandy; rather coarse-grained; very hard and tough; light-bluish grey.

(348) *At Kyler's Corners*, Fox township; on east side of Little Toby creek; *Clermont limestone.*

Very fine-grained; brittle; fracture conchoidal; color, bluish grey.

Elk County.

Caledonia road.

	(349)	(350)
	<i>Benezette, Upper.</i>	<i>Benezette, Middle.</i>
Carbonate of lime,	86.785	76.148
Carbonate of magnesia,	1.408	1.740
Oxide of iron and alumina,	10.070	3.880
Silicious matter,	50.670	15.980

(349) *On Caledonia road*, one mile west from Benezette. *Benezette Upper limestone.* (Pocono). 7' thick.

Appearance very sandy and coarse-grained; fossiliferous; light-bluish grey generally.

(350) *On Caledonia road*, one mile west from Benezette. *Benezette Middle limestone.* (Pocono). 7' thick.

Appearance rather shaly; very brittle; fossiliferous; dark-bluish grey.

Clinton County.

	(351)
	<i>Wilsham.</i>
Carbonate of lime,	95.071
Carbonate of magnesia,	1.044
Carbonate of iron,261
Carbonate of manganese,	trace.
Sulphate of lime,744
Phosphate of lime,	trace.
Water and organic matter,220
Silicic acid,	2.660
	<u>100.000</u>

(351) *Joseph Wilsham's property*, Nippenose Valley, near Rauch's Gap. *Limestone of II*. So-called plaster. See GG, pp. 80 and 81.

Lycoming County.

	(352)	(353)	(354)
	<i>Wilson place.</i>	<i>Ferguson.</i>	<i>Bailey.</i>
Carbonate of lime,	70.589	60.964	72.156
Carbonate of magnesia,	1.740	30.691	20.304
Oxide of iron and alumina, . .	4.680	1.330	1.600
Sulphur,027	.100	.167
Phosphorus,	trace.	.003	.005
Silicious matter,	21.680	6.960	5.570

(352) *From Wilson place*, Porter twp., one half mile north from Jersey Shore. *Limestone of VI*.

Fine-grained; bluish grey; comparatively soft; argillaceous.

(353) *Ferguson's quarry*, Porter twp., one mile above mouth of Pine creek, and two miles west from Jersey Shore. *Limestone of VI*.

Very compact and fine-grained; light bluish grey; mottled with calcite; hard and brittle.

(354) *Bailey's quarry*, Porter twp., near mouth of Pine creek; two miles west from Jersey Shore. *Limestone of VI*.

Fine-grained; light bluish grey; hard and somewhat brittle; with conchoidal fracture.

Wayne County.

	(355)	(356)	(357)	(358)
	<i>Cherry Ridge twp.</i>		<i>Oregon twp.</i>	
Carbonate of lime,	64.392	19.785	17.696	11.196
Carbonate of magnesia,	1.816	3.518	1.589	1.064
Oxide of iron and alumina, . .	4.145	8.903	4.432	4.988
Phosphorus,050	.095	.084	.036
Silicious matter,	23.900	65.470	75.220	80.950

(355) *Cherry Ridge twp.* *Catskill limestone.*

Coarse-grained; brecciated; reddish grey.

(356) *Cherry Ridge twp.* *Catskill limestone.*

Coarse-grained; brecciated; greenish grey; sandy; slightly stained with malachite.

(357) *Oregon twp.* *Catskill limestone.*

Coarse-grained; bluish to greenish grey; with very silicious appearance.

(358) *Oregon twp.* *Catskill limestone.*

Coarse-grained; sandy; greenish grey.

CHAPTER IV.

FIRE-CLAYS.

For a description of the different fire-clay beds and tests of fire-bricks, see Chapter IV of Report MM, pp. 257 to 279.

Elk County.

	(359)	(360)
	<i>Barr & Radcliffe.</i>	<i>Dennison.</i>
Silica,	44.960	67.570
Alumina, (by difference,)	88.172	21.042
Protoxide of iron,518	.621
Titanic acid,	1.240	.930
Lime,120	.100
Magnesia,084	.147
Alkalies,071	traces.
Water,	14.840	9.590

(359) *Barr & Radcliffe mine*, two miles south west from Benezette, Benezette twp.

Rather hard and brittle; fracture conchoidal; color, pearl grey.

(360) *V. Dennison's farm*, Jay twp.

Hard and brittle; irregular fracture; color, pearl grey. (J. M. S.)

Elk County.

Glen Mayo Colliery.

	(361)	(362)
	<i>5' over</i>	<i>Average</i>
	<i>coal bed.</i>	<i>of bed.</i>
Silica,	51.720	56.270
Alumina, (by difference,)	21.786	28.225
Protoxide of iron,*	7.875	5.400
Titanic acid,870	1.190
Lime,060	.010
Magnesia,	2.378	2.066
Alkalies,	4.581	4.089
Water, carbonic acid, and organic matter, 10.780		7.780
	<u>100.000</u>	<u>100.000</u>

* Partly as carbonate of the protoxide of iron.
(95 M^s.)

(361) *Glen Mayo colliery*, Ridgway township. 3' over coal bed.

Comparatively soft and brittle ; fracture irregular ; generally bluish black ; portions of sample dark-pearl grey. (J. M. S.)

(362) *Glen Mayo colliery*, Ridgway township. Average of bed.

Comparatively soft and brittle ; fracture irregular ; color, generally dark-pearl grey.

Jefferson County.

	(363) <i>Brown, Erskine & Co.</i>
Silica,	44.320
Alumina, (by difference,)	38.151
Protoxide of iron,510
Titanic acid,	2.150
Lime,020
Magnesia,234
Alkalies,035
Water,	14.680
	<u>100.000</u>

(363) *Brown, Erskine & Co.*, Bellport Mills. *Fire-clay in Pottsville Conglomerate.*

Fine-grained ; brittle ; fracture irregular, slightly conchoidal ; color, pearl grey.

Clarion County.

	(364) <i>McCauley.</i>	(365) <i>Sligo Fire Brick Works.</i>
Silica,	44.610	56.630
Alumina,	38.010	28.850
Protoxide of iron,	1.251	1.260
Titanic acid,	1.020	.990
Lime,080	.260
Magnesia,407	.079
Alkalies,	1.785	.694
Water and organic matter,	18.630	11.850
	<u>100.743</u>	<u>100.618</u>

(364) *J. McCauley*, three miles west from New Bethlehem, in Anthony's bend of Red Branch creek. *Fire-clay in Pottsville Conglomerate.*

Hard, brittle, dark grey ; rather coarse-grained.

(365) *Sligo Fire Brick Works*, Sligo, Piney township.
Brittle, pearl grey.

Armstrong County.

	(366) <i>Brown, Neale & Orr.</i>	(367) <i>Stewart.</i>
Silica,	50.370	55.960
Alumina,	32.890	28.415
Protoxide of iron,	1.641	1.641
Titanic acid,	1.030	1.010
Lime,310	.070
Magnesia,353	.398
Alkalies,290	.615
Water and organic matter,	13.760	12.690
	<u>100.644</u>	<u>100.797</u>

(366) *Brown, Neale & Orr*, in the ravine of Organ's run, two and one half miles north west from Kittanning. *Kittanning fire-clay*.

Comparatively soft; brittle; more or less stained with organic matter; color generally pearl grey.

(367) *D. Stewart*, at Kittanning. *Kittanning Lower fire-clay*.

Hard, brittle, brownish grey with conchoidal fracture.

Armstrong County.

	(368) <i>Reynolds.</i>
Silica,	58.750
Alumina,	25.170
Protoxide of iron,	2.195
Protoxide of manganese,	trace.
Titanic acid,	1.050
Lime,710
Magnesia,936
Alkalies,	3.535
Water,	8.110
	<u>100.456</u>

(368) *Ross Reynolds*, nearly one mile north east from Kittanning. *Fire-clay under Clarion coal*.

Soft and brittle; unctuous; pearl grey.

CHAPTER V.

MISCELLANEOUS ANALYSES.

In this chapter are included the analyses of pig irons, iron ores, coals, limestones, shales and slags which have not been otherwise classified.

Pig Iron.

Armstrong County.

	(369)	(370)	(371)	(372)
	<i>Mahoning.</i>	<i>Stewardson.</i>	<i>Stewardson.</i>	<i>Pine Creek.</i>
Silicium,	1.872	3.407	2.873	3.195
Sulphur,072	.088	.088	.043
Phosphorus,855	.912	.852	1.035
Manganese, . . .	1.585	2.139	2.068	2.306

(369) *Mahoning furnace.* J. A. Colwell. No. 1 open grey iron.

(370) *Stewardson furnace,* one mile east from mouth of Mahoning creek. F. B. & A. Laughlin. No. 1 open grey iron.

(371) *Stewardson furnace,* one mile east from mouth of Mahoning creek. F. B. & A. Laughlin. Open-grained No. 1 iron.

(372) *Pine Creek furnace,* six miles north east from Kit-tanning. No. 1 open grey iron.

Pig Iron.

Lycoming County.

	(373)
	<i>Safe Harbor furnace.</i>
Silicium,	1.311
Sulphur,024
Phosphorus,	1.458
Manganese,202

(373) *Safe Harbor furnace,* Lycoming county. Old iron bolt made at this furnace and mill.

*Iron Ore.**Monroe County.*

(374)

Rossland Mining Company.

Sesquioxide of iron,	88.142
Sesquioxide of manganese,910
Sesquioxide of cobalt,010
Alumina,	4.454
Lime,610
Magnesia,828
Sulphuric acid,017
Phosphoric acid,304
Water and organic matter,	9.440
Silicious matter,	45.060
	<hr/>
	99.805
	<hr/>
Metallic iron,	26.700
Metallic manganese,634
Sulphur,019
Phosphorus,133
Phosphorus in 100 parts iron,498

(374) *Rossland Mining Company's* Rossland mine, Ross twp., two and one half miles north of the Blue mountain. R. M. Jones, Bangor, Northampton county. Sample (124 pieces) selected by Mr. H. M. Chance.

*Fossil Ore of V.**Montour County.*

(375)

Liberty mines.

Sesquioxide of iron,	62.142
Sesquioxide of manganese,030
Alumina,	7.284
Lime,450
Magnesia,230
Sulphuric acid,027
Phosphoric acid,224
Water and organic matter,	4.791
Silicious matter,	24.670
	<hr/>
	99.848
	<hr/>
Metallic iron,	43.500
Metallic manganese,021
Sulphur,011
Phosphorus,008
Phosphorus in 100 parts iron,335

(375) *Liberty mines*, near Mooresburg, Liberty twp. Sample from mines located on north dip of Montour ridge, in Montour county, one mile from the Catawissa branch of the P. & R. R. R. Sample is a cross section of the soft

fossil vein, so cut as to give an average of the vein. Mines owned and operated by Mr. R. M. Cummings. *Fossil ore of V.*

Magnetic Iron Ore.

Lebanon County.

	(376) Cornwall.
Bisulphide of iron,722
Magnetic oxide of iron,	61.625
Ferrio oxide,	11.840
Manganic-oxide,195
Cobaltic oxide,080
Oxide of copper,040
Alumina,	1.936
Lime,	1.880
Magnesia,	4.544
Sulphuric acid,	1.145
Phosphoric acid,023
Water,	4.380
Silica,	11.830
	<hr/>
	99.640
	<hr/>
Metallic iron,	53.250
Metallic manganese,186
Sulphur,843
Phosphorus,010
Phosphorus in 100 parts iron,018

(376) *Cornwall iron ore mines*, Lebanon county. Magnetic iron ore used as a "fix" in the puddling furnaces at Paxton Rolling-mill, Harrisburg.

Adams County.

	(377) Magnetic sand.
Protoxide of iron,	5.785
Sesquioxide of iron,	22.428
Protoxide of manganese,340
Sesquioxide of chromium,	trace.
Alumina,	8.923
Titanic acid,	7.370
Lime,	3.040
Magnesia,	1.812
Water,	4.988
Silica,	42.130
Alkalies and undetermined,	3.184
	<hr/>
	100.000
	<hr/>
Metallic iron,	20.200

(377) *Magnetic sand*, from Fairfield and Gettysburg road, two miles east from Fairfield, Adams county.

Micaceous Hematite.

York County.

	(378)
	<i>Dare</i>
Metallic iron,	61.950
Sulphur,020
Phosphorus,010
Silicious matter,	9.910
Phosphorus in 100 parts iron,016

(378) *From the estate of Judge Dare*, one mile from Bowmandale, Monaghan township, York county, on bank of Yellow Breeches creek.

A foliated, micaceous hematite, carrying a small quantity of quartz sand. (J. M. S.)

Brown Hematite.

Blair County. Franklin County.

	(379)	(380)
	<i>Patterson.</i>	<i>McConnell tract.</i>
Sesquioxide of iron,	77.780	62.285
Sesquioxide of manganese,	trace.	1.769
Sesquioxide of cobalt,370	—
Alumina,850	1.553
Lime,880	.360
Magnesia,472	.212
Sulphuric acid,022	.085
Phosphoric acid,483	.302
Water,	11.770	10.784
Silicious matter,	7.840	22.290
	<u>99.917</u>	<u>99.640</u>
Metallic iron,	54.450	43.600
Metallic manganese,	trace.	1.232
Sulphur,009	.034
Phosphorus,211	.132
Phosphorus in 100 parts iron,387	.303

(379) *Patterson mine*, one mile south from Williamsburg, Blair county. *Brown hematite of II.* Sample brought to Laboratory by Mr. J. D. Patterson, Resident Clerk House of Representatives, 1880-81. (J. M. Stinson.)

(380) *McConnell tract*, about four miles west from Mer-

cersburg, Franklin county, Pa. *Brown hematite of II.*
Sample sent to Laboratory by Mr. Thomas B. Kennedy,
president of the C. V. R.R Company.

The following analyses (381 to 403) were made of specimens sent in to the Laboratory by Mr. John F. Carll, and their discussion will be in place in his Report on the Oil Regions.

Allegheny County.

	(381)	(382)	(383)	(384)
	<i>Boyd's Hill gas well.</i>			
Carbonate of iron,	21.750	16.571	10.771	8.596
Carbonate of lime,	6.892	2.678	.942	.492
Carbonate of magnesia,	2.194	1.875	1.413	1.831
Alumina,	9.670	9.651	5.152	6.050
Silicious matter,	54.360	63.270	77.340	78.500
Iron,	10.500	8.000	5.200	4.150
Lime,	3.680	1.500	.530	.270
Magnesia,	1.045	.898	.673	.372

(381) *Boyd's Hill gas well*, at Pittsburgh. Specimens taken from a depth of 94' to 305'. *Lower Barren measures.*

Specimens in small lumps; of a dark grey to bluish grey color; general appearance shaly; contain small pieces of carbonate of iron ore.

(382) *Boyd's Hill gas well*, at Pittsburgh. Specimens taken at depth of 350' to 482'. *Freeport group.*

Dark bluish grey; lumps of fire-clay prominent; show small pieces of carbonate ore.

(383) *Boyd's Hill gas well*, at Pittsburgh. Specimens taken at depth of 587' to 612'. *Kittanning group.*

Reddish grey to bluish grey; general appearance sandy; show considerable white sand, with fine particles of carbonate of iron ore.

(384) *Boyd's Hill gas well*, at Pittsburgh. Specimens taken at depth of 642' to 657'.

Dark bluish grey; appearance sandy; also shaly; small specks of mica numerous; a few small particles of carbonate ore.

Allegheny County.

	(335)	(336)	(337)
	<i>Boyd's Hill gas well.</i>		
Carbonate of lime,	64.535	38.071	59.268
Carbonate of magnesia,	2.177	1.474	1.421
Oxide of iron and alumina,	6.270	3.200	3.710
Silicious matter,	23.510	55.720	33.970

(335) *Boyd's Hill gas well*, at Pittsburgh. Specimens taken at depth of 879' to 889'. *Umbral* (?)

Dark bluish grey coarse powder; small pieces of shale visible.

(336) *Boyd's Hill gas well*, at Pittsburgh. Specimens taken at depth of 889' to 914'. *Umbral* (?)

Light bluish grey, inclining to greenish grey; show considerable fine white sand.

(337) *Boyd's Hill gas well*, at Pittsburgh. Specimens taken at depth of 889' to 914'. *Umbral* (?); being No. (336) washed and sifted.

Light bluish grey and greenish grey; not so sandy as No. (336).

Beaver County.

	(338)	(339)	(390)
	<i>Economy Well No. 2.</i>		
Carbonate of iron,	29.000	8.492	5.593
Carbonate of lime,	10.732	1.125	4.396
Carbonate of magnesia,	10.821	2.572	2.534
Alumina,	3.500	4.953	3.923
Silicious matter,	44.630	82.120	82.740
Iron,	14.000	4.100	2.700
Lime,	6.010	.630	2.460
Magnesia,	5.153	1.225	1.207

(338) *Economy well No. 2*, at Beaver Falls, Beaver county. Drillings from the *approximate horizon of the Sharon coal bed*. From depth of 250' to 274'.

Dark bluish grey; small scales of mica abundant; has the general appearance of a silicious carbonate ore.

(339) *Economy well No. 2*, at Beaver Falls. Specimens taken at a depth of 430' to 470'; *from approximate horizon of the Sharpsville sandstone*.

Light grey generally, with plates of bluish black shale;

appearance sandy ; scales of mica abundant ; small particles of carbonate ore.

(390) *Economy well No. 2*, at Beaver Falls. Specimens taken at depth of 1940' to 1950'. *Berea grit* (?)

Light grey and dark grey ; general appearance sandy ; numerous small scales of mica.

Venango County.

	(391) Near McClintockville.	(392) Near President.	(393) Near Franklin.
Carbonate of lime,	29.643	31.964	37.964
Carbonate of magnesia,438	.658	1.188
Oxide of iron and alumina,	1.950	2.200	3.880
Silicious matter,	66.260	63.280	55.110

(391) *Venango county, one half mile from McClintockville, at base of Pithole grit.* 0' to 2' thick.

Appearance, sandy ; rather fine grained ; hard and tough ; luster, vitreous, somewhat pearly ; color, light bluish grey.

(392) *Venango county, one half mile from President, at base of Pithole grit.* 0" to 6" thick.

Appearance sandy ; hard and tough : rather fine grained ; luster vitreous, slightly pearly ; color, dark bluish grey.

(393) *Venango county, one half mile south from Franklin. About 20 feet below Shenango sandstone.* 0" to 18" thick.

Conglomerate of quartz pebbles and silicious limestone. Color, generally bluish grey. Portion freest from pebbles selected for analysis.

Venango County.

	(394) Near Fosters.
Carbonate of iron,	48.160—23.25 per cent iron.
Carbonate of lime,	6.696
Carbonate of magnesia,	7.204 partly as silicate (mica.)
Alumina,	3.147
Phosphorus,505
Silicious matter,	31.960

(394) *Venango county, one half mile east from Fosters. Below Shenango Sandstone.*

Nodules of carbonate of iron ore ; with a greyish sand-

rock containing numerous quartz pebbles and small nodules of carbonate ore.

The carbonate ore, containing numerous fossil casts, is rather fine-grained and of a dark-brownish grey color; it shows considerable mica in thin scales; also a few specks of pyrites; and is irregularly seamed with calc-spar.

Mercer County.

	(395) <i>Snodgrass Quarry.</i>	(396) <i>Gibson Run.</i>
Carbonate of lime,	30.893	27.535
Carbonate of magnesia,	2.444	3.405
Carbonate of iron,	11.011	16.708
Alumina,	1.996	1.977
Silicious matter,	52.650	49.540
Metallic iron,	5.316	8.066

(395) *At base of Snodgrass flag quarry*, one half mile east from Jamestown, Mercer county. 6" to 12" thick. Appearance sandy; rather fine-grained; hard and tough; scales of mica numerous; luster vitreous, somewhat pearly. Color, bluish grey.

(396) *Gibson run*, just above Gibson well, Jamestown borough. Near top of exposed flags, 2' to 3' thick.

Same general appearance as No. (395).

Allegheny County.

	(397) <i>Deposit on tubing.</i>	(398) <i>Deposit along ditch.</i>
Carbonate of lime,	89.535	53.910
Carbonate of magnesia,	1.876	11.351
Carbonate of baryta,	4.679	8.884
Oxide of iron and alumina,	2.090	3.640
Silicious matter,820	19.160

(397) *Deposit on tubing from the water*, at Tarentum well, Allegheny county.

The deposit is very thin; has a somewhat coarse fibrous structure and greyish white color.

(398) *Deposit along ditch leading from Tarentum well*, Allegheny county.

The deposit consists of a thin, nodular, shelly material filled with a light brown clay. The shell after being tolerably well cleaned from the clay was analyzed.

Warren County.

	(399)	(400)
	<i>Deposit on well tubing on Clapp farm.</i>	
Carbonate of lime,	94.253	95.893
Carbonate of magnesia,	1.331	1.165
Carbonate of baryta,626	.693
Oxide of iron and alumina,	1.090	.860
Silicious matter,	1.610	.030

(399) *Deposit on the outside of tubing in well on Clapp farm*, three miles south west from Tidioute, Warren county.

Deposit thin and of a greyish-white color generally. Structure for the most part granular; at places fibrous. Emits a strong petroleum odor when being ground up.

(400) *Deposit on tubing in well on Clapp farm*, three miles south west from Tidioute, Warren county.

Deposit $\frac{1}{2}$ " to $\frac{3}{4}$ " thick; yellowish white in color and generally fibrous in structure. It emits a strong odor of petroleum when being ground up.

Venango County.

	(401)
	<i>Deposit in working barrel.</i>
Sulphate of baryta,	94.74
Sulphate of lime,85
Sulphate of magnesia,	trace.
Oxide of iron,17
Water and organic matter,	2.13
Silica,	2.09
	<hr/> 99.98 <hr/>

(401) *Deposit from inside of working barrel* from well on Oil creek, Venango county (?).

Deposit thin; greyish white, with a somewhat concentric structure.

	Warren, Penna. (402)	Panama, N Y. (403)
	<i>Asylum quarry rock.</i>	<i>Panama rock.</i>
Carbonate of lime,	98.085	98.500
Carbonate of magnesia,	1.793	.983
Carbonate of baryta,	none.	none.
Oxide of iron,020	.040
Silicious matter,010	.340

(402) *Deposit in vertical crevices of Asylum quarry rock*, at Warren, Pa.

Color pure white to yellowish white; structure fibrous generally; at places granular.

(403) *Deposit in vertical crevices of Panama rock, at Panama, N. Y.*

Consists of an almost pure white fibrous material with cavities filled with a yellowish white quartz sand. Separated from sandy portion and analyzed.

Franklin County.

	(404) <i>David Shook.</i>
Carbonate of lime,	96.250
Carbonate of magnesia,556
Oxide of iron and alumina,620
Phosphorus,026
Water and organic matter,	1.360
Silica,	1.210
	<hr/>
	100.022
	<hr/>

(404) *Mr. David Shook's farm, Greencastle, Franklin county. Marl.*

Sample sent to Laboratory by Rev. W. V. Ganoe. (J. M. S.)

Crawford County.

	(405) <i>Clay from gravel pit well.</i>
Silica,	51.010
Alumina,	20.930
Protoxide of iron,	6.831
Titanic acid,	1.090
Lime,	3.010
Magnesia,	2.511
Carbonic acid,	5.779
Alkalies,	4.372
Water,	3.840
	<hr/>
	99.373
	<hr/>

(405) *Clay from a gravel pit well near Titusville, Crawford county. (J. M. S.)*

Wayne County.

	(406) <i>Catskill Red shale.</i>
Silica,	59.280
Alumina, (by difference,)	19.877
Sesquioxide of iron,	10.071
Lime,250
Magnesia,	1.917

Sulphuric acid,012
Phosphoric acid,158
Alkalies,	4.855
Water,	3.600
	<u>100.000</u>
Metallie iron,	7.050
Sulphur,005
Phosphorus,069

(406) *Catskill Red shale*, Texas twp., Wayne county.
(J. M. S.)

Armstrong County.

(407)

Slag from Stewardson furnace.

Silica,	31.800
Alumina,	12.580
Protoxide of iron,630
Protoxide of manganese,994
Lime,	48.663
Sulphide of calcium,	8.105
Magnesia,	2.101
	<u>99.873</u>
Sulphur,	1.378

(407) *Slag made at Stewardson furnace*, Armstrong county, on March 2, 1880.

Bradford County.—Coals.

Samples of coal from the same part of the Barclay bed intended to test by their analyses the effect of exposure to the atmosphere by drainage of the water in mining.

Samples were selected by Mr. F. F. Lyon, Engineer of the Barclay mines, and forwarded to the Laboratory by Mr. James Macfarlane.

	(408)	(409)	(410)
Water @ 225°,965	1.145	1.365
Volatile matter,	17.430	16.915	16.395
Fixed carbon,	69.246	73.672	71.877
Sulphur,709	.603	.523
Ash,	11.650	7.665	9.840
	<u>100.000</u>	<u>100.000</u>	<u>100.000</u>
Color of ash,	grey.	grey.	grey.
Coke, per cent.,	81.605	81.940	82.240
Fuel ratio,	1 : 3.97	1 : 4.36	1 : 4.32
Character of coke,	fair.	inferior.	inferior.

(408) *From the drift east from the store*, near the mouth of the drift opened in 1859.

Coke fairly coherent, slightly puffed.

(409) *From the Old Gatiss opening*; from a pillar exposed to the atmosphere about 10 years, near the drift mouth. But as this is a very old opening, its water must have been drained off about 25 or 30 years.

Coke inferior, powdery.

(410) *From mouth of Gatiss opening*; outcrop exposed to the light as well as to the atmosphere about 30 years.

Coke slightly coherent; powdery. Coal seems to alter its shape but little during coking.

	(411)	(412)	(413)
Water @ 225°	1.025	1.595	1.240
Volatile matter,	17.375	16.315	17.725
Fixed carbon,	71.972	71.895	72.633
Sulphur,633	.575	.537
Ash,	8.995	9.620	7.865
	<u>100.000</u>	<u>100.000</u>	<u>100.000</u>
Color of ash,	grey.	cream.	grey.
Coke, per cent.,	81.600	82.090	81.035
Fuel ratio,	1:4.14	1:4.34	1:4.09
Character of coke,	fair.	worthless.	inferior.

(411) *Fresh mined coal taken from where it has always been under water.*

Coke coherent, firm; quality fair.

(412) *Pillar coal from inside of drift No. 2*, exposed to the atmosphere 14 years.

Coke, inferior, powdery.

(413) *From a piece of coal that has lain in front of the office at Barclay for nine years* exposed to the weather.

Coke, inferior, powdery.

Bradford County.—Coke.

	(414)
Fixed carbon,	85.517
Sulphur,	1.505
Ash,	12.978
	<u>100.000</u>
Color of ash,	pinkish grey.
Phosphorus,0076

(414) Coke made in Laboratory from coal from the Long Valley Coal Company's openings, two miles northeast from Barclay.

County.	No. of anal.	Mineral.	Owner.	Page.
Armstrong,	. . . 367,	Fire-clay,	D. Stewart,	97
Do.	. . . 368,	do.	Ross Reynolds,	97
Do.	. . . 369,	Pig iron,	Mahoning furnace,	99
Do.	. . . 372,	do.	Pine Creek furnace,	99
Do.	. . . 370,371,	do.	Stewardson furnace,	99
Do.	. . . 407,	Slag,	Stewardson furnace,	109
Beaver, . . .	388,389,390,	Miscellaneous,	Economy well No. 2,	104
Bedford, 133,134,	Fossil ore of V,	James Sill,	43
Blair, 379,	Brown hematite of II,	Patterson mine,	102
Bradford, 408 to 413,	Coals,	Barclay coal basin, 109,110	
Do.	. . . 261,	Coal,	Long Valley Coal Co.,	75
Do.	. . . 414,	Coke,	do. do.	110
Butler, 166,	Carbonate ore,	Hindinan farm,	54
Do.	. . . 167,	do.	Major Mobly,	54
Cameron, 241,	Dagus coal,	Mt. Hope colliery,	70
Do.	. . . 242,	Clarion coal,	do. do.	70
Centre, 135,	Brown hematite of II,	Wm. B. Addleman,	43
Chester, 272,	Limestone of II,	Benj. Swayne,	79
Clarion, 200,	Freeport Upper coal,	Goheen's bank,	62
Do.	. . . 192,	Freeport Lower coal,	Fairmount Coal Co.,	60
Do.	. . . 197,198,	do. do.	do. do.	61
Do.	. . . 201,	do. do.	Goheen's bank,	62
Do.	. . . 202,	do. do.	McNutt, (Smullen,)	62
Do.	. . . 203,	do. do.	J. McClure, (Wilkins,)	62
Do.	. . . 207,	do. do.	T. Murphy,	63
Do.	. . . 196,	Kittanning Middle coal,	Fairmount Coal Co.,	61
Do.	. . . 209,	do. do.	T. O. Somerville,	63
Do.	193,194,195; 199,	Kittanning Lower coal,	Fairmount Coal Co., 60; 61	
Do.	. . . 204,	do. do.	Songer,	63
Do.	. . . 205,	do. do.	Sloan,	63
Do.	. . . 206,	do. do.	Clarion Coal Co.,	63
Do.	. . . 208,	do. do.	Sligo Branch Coal Co.,	63
Do.	. . . 210,	do. do.	Fox bank,	63
Do.	. . . 211,	do. do.	McCall's bank,	63
Do.	266,267,268,269,	Cokes,	Fairmount Coal Co.,	76
Do.	. . . 270,	Coke,	Red Bank furnace,	77
Do.	. . . 271,	do.	Sligo Branch Coal Co.,	77
Do.	. . . 164,	Carbonate ore,	Fairmount Coal Co.,	53
Do.	. . . 161,	Buhrstone ore,	Sligo furnace,	52
Do.	. . . 162,	do.	Fox farm,	52
Do.	. . . 163,	do.	Hindman quarry,	52
Do.	. . . 310,	Freeport Upper limestone,	New Athens,	86
Do.	. . . 311,	do. do.	Reichert's quarry,	86
Do.	. . . 312,	Freeport Lower limestone,	Reimersburg,	86
Do.	. . . 313,	Ferriferous limestone,	Long Run,	87
Do.	. . . 314,	do. do.	Hindman quarry,	87
Do.	. . . 315,	do. do.	Sligo furnace,	87
Do.	. . . 316,	do. do.	Barger quarry,	87
Do.	. . . 364,	Fire-clay,	J. McCauley,	96
Do.	. . . 365,	do.	Sligo Fire-Brick Works,	96
Clinton, 243,	Coal,	H. Merriman & Co.,	71

122 M³. REPORT OF PROGRESS. A. S. McCREATH.

County.	No. of anal.	Mineral.	Owner.	Page.
Clinton,	233, 264,	Coke,	H. Merriman & Co., . . .	75
Do.	136, 137,	Brown hematite of II, (?)	Salona ore bank, . . .	44
Do.	351,	Limestone of II,	Joseph Wilsham, . . .	93
Crawford,	169,	Carbonate ore,	Robert Snodgrass, . . .	55
Do.	405,	Clay,	Gravel pit well, . . .	108
